Reliable Software Technologies - Ada-Europe 2001 Dirk Craeynest,Alfred Strohmeier,2003-06-29 The Sixth International Conference on Reliable Software Technologies Ada Europe 2001 took place in Leuven Belgium May 14 18 2001 It was sponsored by Ada Europe the European federation of national Ada societies in cooperation with ACM SIGAda and it was organized by members of the K U Leuven and Ada Belgium This was the 21st consecutive year of Ada Europe conferences and the sixth year of the conference focusing on the area of reliable software technologies The use of software components in embedded systems is almost ubiquitous planes fly by wire train signalling systems are now computer based mobile phones are digital devices and biological chemical and manufacturing plants are controlled by software to name only a few examples Also other non embedded mission critical systems depend more and more upon software For these products and processes reliability is a key success factor and often a safety critical hard requirement It is well known and has often been experienced that quality cannot be added to software as a mere afterthought This also holds for reliability Moreover the reliability of a system is not due to and cannot be built upon a single technology A wide range of approaches is needed the most difficult issue being their purposeful integration Goals of reliability must be precisely defined and included in the requirements the development process must be controlled to achieve these goals and sound development methods must be used to fulfill these non functional requirements *Embedded Systems Design* Bruno Bouyssounouse,2005-03-30 This extensive and increasing use of embedded systems and their integration in everyday products mark a significant evolution in information science and

technology Nowadays embedded systems design is subject to seamless integration with the physical and electronic environment while meeting requirements like reliability availability robustness power consumption cost and deadlines Thus embedded systems design raises challenging problems for research such as security reliable and mobile services large scale heterogeneous distributed systems adaptation component based development and validation and tool based certification This book results from the ARTIST FP5 project funded by the European Commission By integration 28 leading European research institutions with many top researchers in the area this book assesses and strategically advances the state of the art in embedded systems The coherently written monograph like book is a valuable source of reference for researchers active in the field and serves well as an introduction to scientists and professionals interested in learning about embedded systems design

Schantz, 2008-11-23 This volume contains the proceedings of the International Middleware Conference held in Leuven Belgium during December 1-4 2008 This year marked the ninth rendition of this annual conference in its current format initially opted in 1998 aspiring to serve as the premier venue focusing exclusively on important middleware results A lot has happened over the intervening 10 year span Middleware has become pervasive in an increasingly interconnected world with its concepts now securely embedded in the notional architectures driving forward the information age The conference continues to be a focal point for important new initiatives and results for new generations of middleware With each succeeding year it has become an even more competitive publishing venue further extending its selectivity this year as well Of the 117 submissions only 21 were able to receive acceptance invitations for an acceptance rate of less than 18% Competitive indeed Additionally these submissions continue to come from all over the globe spanning authors from 23 countries A truly world wide endeavor But other things have also changed as we turn the corner on the first decade of this conference In many ways middleware has achieved significant success where it really counts in terms of technical innovations advanced capabilities successful ideas and embedded systems which permeate society industry government and academia With this success comes maturity *The Industrial Information Technology Handbook* Richard Zurawski, 2018-10-03 The Industrial Information Technology Handbook focuses on existing and emerging industrial applications of IT and on evolving trends that are driven by the needs of companies and by industry led consortia and organizations Emphasizing fast growing areas that have major impacts on industrial automation and enterprise integration the Handbook covers topics such as industrial communication technology sensors and embedded systems The book is organized into two parts Part 1 presents material covering new and quickly evolving aspects of IT Part 2 introduces cutting edge areas of industrial IT The Handbook presents material in the form of tutorials surveys and technology overviews combining fundamentals and advanced issues with articles grouped into sections for a cohesive and comprehensive presentation The text contains 112 contributed reports by industry experts from government companies at the forefront of development and some of the most renowned academic and research institutions worldwide Several of the reports on recent developments actual deployments and trends cover subject matter presented to the public for the first time **On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops** R.

Meersman, 2004-10-14 This book constitutes the joint refereed proceedings of seven international workshops held as part of OTM 2004 in Agia Napa Cyprus in October 2004. The 73 revised papers presented together with 31 abstracts of posters from the OTM main conferences were carefully reviewed and selected from more than 150 submissions. In accordance with the 7 workshops, the papers are organized in topical sections on grid computing and its applications to data analysis, Java technologies for real time and embedded systems, modeling inter organizational systems, regulatory ontologies, semantics, and e learning. PhD symposium and interoperability.

On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection. A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience. These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself. In fact, their attendance was largely sponsored by the other participants. If evaluated as successful, it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum. All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application pull created by the Internet and the so called Semantic Web.

For DOA 2004, the primary emphasis stayed on the distributed object infrastructure for ODBASE 2004, it was the knowledge bases and methods required for enabling the use of formal semantics and for CoopIS 2004, the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations. These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them.

ECOOP - Object-Oriented Programming Erik Ernst, 2007-07-27

The 21st European Conference on Object Oriented Programming ECOOP 2007 was held in Berlin, Germany, on July 30 to August 3, 2007. ECOOP is the most important and inspiring forum in Europe and beyond for researchers, practitioners, and students working in that smorgasbord of topics and approaches known as object orientation. This topic area was explored and challenged by excellent invited speakers, two of which were the winners of this year's Dahl-Nygaard award. In the carefully refereed and selected technical papers, on posters, via demonstrations, and in tutorials. Each of the many workshops complemented this with a very interactive and dynamic treatment of more specific topics. Usually, panels allowed for loud and lively disagreement. Yet it is one of ECOOP's special qualities that this plethora of activities add up to a coherent and exciting whole rather than deteriorating into chaos. The Program Committee received 161 submissions this year. Only 135 of them were carried through the full review process because of a number of retractions and a number of submissions of abstracts that were never followed

by a full paper However the remaining papers were of very high quality and we accepted 25 of them for publication Helping very good papers to be published is more useful than having an impressively low acceptance rate The papers were selected according to four groups of criteria whose priority depended on the paper relevance originality and significance precision and correctness and presentation and clarity Each paper had three four or five reviews depending on how controversial it was

turned out to be a very effective instance of distributed collaborative processing The conference also enjoyed the generous support of 11 industrial sponsors
