a diario ya utilizan este tipo de realidad ya que si se quiere encontrar como llegar a un lugar determinado y no se sabe como la gran mayoría de estos usuarios optan por buscar a través de alguna aplicación y no coger el típico callejero. Es decir, recurren a aplicaciones como Yelp o también el mapa de Google donde desde el punto de vista conceptual se podría considerar como un ejemplo de realidad aumentada. Respecto al BIM dependiendo del autor podemos encontrar una definición u otra donde la idea común que presentan podría sintetizarse como la creación de procesos de generación y gestión de datos del proyecto constructivo durante su ciclo de vida utilizando software dinámico de modelado en tres dimensiones a tiempo real vinculado con otra información digital como son los flujos de trabajo con el objetivo de reducir la pérdida de tiempo recursos en el diseño y en la construcción. Para poder implementar el modelado de la información BIM es necesario tener un software compatible. En el mercado actual hay una gran variedad de programas pero si nos centramos en nuestro campo de estudio vamos a trabajar con los paquetes de Autodesk por un lado Revit y AutoCAD por otro 3ds Studio MAX 3ds Max que no está vinculado a entornos BIM pero es ampliamente usado por los arquitectos para la representación fotorrealista de los edificios lo que les aproxima a las herramientas RV/RA. Si empezamos a explorar el uso que posee cada uno de los programas anteriores dentro de nuestro campo de estudio vemos por ejemplo que en Revit vamos a poder crear una tabla de planificación conocer el tipo de material que se va a colocar o crear cualquier tipo de estructura tanto en alzado como en tres dimensiones incluso se puede modificar una parte de la misma como por ejemplo un pilar intermedio y automáticamente se modifica en todo el proyecto incluidos planos y vistas. AutoCAD es una de las herramientas más longevas y utilizadas dentro del sector posee una gran variedad de usos permite crear diseñar y modelizar planos tanto en 2D como 3D pero en nuestro caso nos serviría sobre todo para la visualización de planos comparación de instalaciones cotas y detalles constructivos. 3ds Max tiene una implementación basada fundamentalmente en la visualización diseño y recorrido en 3D es una potente máquina para generar un renderizado. Su uso habitual está ligado al sector de la producción y animación. Posee una carpeta de materiales y texturas que nos servirá más adelante para hacer la experiencia de RV más inmersiva y realista. Unity 3d ha sido la herramienta escogida para implementar la realidad virtual. Puede definirse como un motor de videojuegos multiplataforma con contenidos interactivos en 3D lo que nos permitirá diseñar recorridos virtuales por la edificación. A nivel de implementación hemos partido de dos modelos ya existentes del edificio B0 del Campus Nord uno desarrollado en 3ds Max que representa el diseño conceptual del módulo y que nos servirá para el estudio arquitectónico y estructural y otro en formato Revit preparado como modelo As Built donde analizaremos sus instalaciones y fontanería y también nos servirá para la comparación de modelos. Cada uno de estas dos representaciones del edificio nos sirven para estudiar dos casos de uso particulares. En el primero de ellos exploraremos las posibilidades que ofrece el recorrido virtual para la construcción tales como revisión de la arquitectura etiquetado virtual de espacios comparativa de planos efectos de iluminación y disposición de mobiliario etc. El segundo caso de estudio se centra en la revisión de las instalaciones como medio para evitar solapamientos entre diferentes proveedores.
