*Deep-Space Probes* Gregory L. Matloff,2013-11-27 This excellent book by Dr Gregory Matloff could be viewed as a large multi disciplinary compendium of past research current investigations and future research in astronautics However unlike conventional works that are usually closed this book is an open guide in three main respects it contains progressive exercises as the chapter and section topics evolve it provides the reader with many updated references and it

clearly indicates projected research areas that could become current research in the near future For a student the included exercises could be transformed into small worksheets or notebooks featuring many modern symbolic or algebraic computation systems that run on desktop or laptop computers Thus rapid and progressive study is possible a sort of learning library driven by the author and by the bibliography at the end of each chapter More than 340 references for both professionals and students have been selected to provide the reader with a sound basis for expanding his or her knowledge of the many different subjects dealt with authoritatively by the author who for several decades has worked actively in various fields of astronautics A systematic and unhurried study of this book will produce for the reader an extraordinarily enlarged number based view of spaceflight and its significant impact on our future global society

**Geoforming Mars** Robert Malcuit, 2020-11-25 This book offers an exercise in theoretical planetology presenting five different scenarios to assess the evolution of habitable conditions on Mars to assess planetary terraforming potential and to give insight into the ongoing search for habitable exoplanets Four of the scenarios involve Martian satellite capture models in which gravitational capture via tidal deformation and energy dissipation processes are measured to predict a pathway of biological evolution while the fifth scenario analyzes the possible model that led to the Mars that we have today i e with no life forms In ten chapters readers will learn how a Mars like terrestrial planet can be transformed into a habitable planet and what conditions must be assessed when searching for exoplanets in a star centered orbit to support life The book is intended for planetologists and general enthusiasts of planetary evolution and our solar system
