Sharma,2014-05-26 This volume presents key topics of current interest with regard to several pathophysiological conditions including a the basic and clinical aspects of bradykinin receptor antagonists b the kallikrein kinin pathways in hypertension and diabetes c tissue kallikrein kinin therapy for hypertension and organ damage d the renal tissue kallikrein kinin system in the kidney and novel potential drugs for salt sensitive hypertension e the kallikrein kinin system in diabetes retinopathy and f genetic manipulation and genetic variation of the kallikrein kinin system and their impacts on cardiovascular and renal disease Written by internationally reputed scientists the book provides an essential overview of the latest developments in the field of kinin research making it a valuable asset for endocrinologists nephrologists cardiologists pharmacologists physiologists ophthalmologists and rheumatologists Furthermore it is also intended for postgraduate students in the fields of medicine pharmacy physiology and pharmacology and those working at research organizations      *Recent Progress in the Study and Therapy of Brain Edema* K. Go,2013-03-09 This issue contains the proceedings of the most recent Inter national Symposium on Brain Edema the 5th in a series of conferences starting 1965 in Vienna The ever since increasing interest in this field may not only result from the fact that in clinical terms the problem is not solved yet but also from the many fascinating physiological and biochemical questions remaining Moreover the rapid progress of technical physiological and bio chemical developments provides a permanent challenge to probe the subject with better and better resolution The current proceedings provide many examples It is safe to assume that the history of brain edema research is familiar to most of its participants Therefore suffice it to remark that since the first histopathological recognition of brain edema as a separate entity among the multitude of intracranial space occupying lesions progress in the understanding of its pathogenesis has not been straightforward On the contrary it has been complicated by confusing notions and concepts some of which may have resulted from the elusiveness of the edematous changes in early histological studies due to the inadequacy of the light microscope Although brain edema occurs concomitantly in many pathological conditions of the brain it has been suggested that its role is collateral only Nevertheless the potential of brain edema as a space occupying lesion is not trivial since it raises intracranial pressure and eventually may result in lethal cerebral herniation      **Recent Progress on Kinins** Bönner,Fritz,2012-04-02      **Kinins V** K. Abe,2013-04-18 The physiological and pathological significance of the kallikrein kinin system was recently explored extensively resulting in a rapid accumulation of information regarding their potential importance This publication provides an integrated picture of the latest information on the kallikrein kinin system It contains contributions from morphologists geneticists biochemists pharmacologists physiologists and clinicians The Fifth International Kinin Congress Nov 29 Dec 3 1987 provided a forum for

the exchange of information and ideas on the kallikrein kinin system The participation of more than 350 scientists from 23 countries reflects the widespread interest and international scope of research activity in the physiological and pathological functions of the kallikrein kinin system A total of 275 papers including posters were presented attesting to the unquestioned success of this Congress These proceedings in two volumes contain the collective studies presented studies of high scientific standard that provoked stimulating and fruitful discussions Also included in these volumes are the two plenary lectures presented by Dr H A Margolius USA and Dr S Nakanishi Japan During the last decade our knowledge of the role of the kallikrein kinin system in health and disease has been greatly advanced by the development of antagonists to bradykinin and the introduction to clinical practice of converting enzyme inhibitors Symposia on converting enzyme and on recent advances in research on the kallikrein kinin system are included in the proceedings

Hashimoto, Masaharu Yasue, 2012-12-06 The dawn of neurosurgery can be traced back to the first description preserved in the Edwin Smith papyrus 3000 BC which dealt with head and spinal injury In the course of 5000 years since the first record in Egypt advances in lifestyle and technology have brought about our modern civilized society However as a result of civilization currently the total number of severe head injuries worldwide is believed to exceed 10000000 and the number of severe spinal injuries is believed to be more than 75 000 each year This means that central nervous system injury is not only the oldest topic in neurosurgery but that it is also of critical importance in modern life Taking these problems into consideration the International Neurotraumatology Committee was organized in 1965 as an affiliated Committee of the World Federation of Neurosurgical Societies The first scientific meeting was convened by the Committee in Marseilles in 1970 Nine further meetings were subsequently held in Europe Africa and South America The meeting was first named International Conference on Recent Advances in Neurotraumatology ICRAN by Professor Phillip Harris when the scientific meeting was held in Edinburgh in 1982 The tenth meeting ICRAN 1992 the first one in Asia was held at Karuizawa Japan from September 23rd to 26th 1992      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1971

**Pharmacology of the Skin I**, 2012-12-06 The recent interest in the pharmacology of the skin and the treatment of its diseases has come about for two reasons The first is a realisation that many aspects of pharmacology can be studied as easily in human skin where they may be more relevant to human physiology and diseases as in animal models Examples of this are the action of various vasoactive agents and the isolation of mediators of inflammation after UV irradiation and antigen induced dermatitis The second reason is the fortuitous realisation that a pharmacological approach to the treatment of skin disease need not always await the full elucidation of etiology and mechanism For example whilst the argument continued unresolved as to whether the pilosebaceous infection which constitutes acne was due to a blocked duct or to a simple increase in sebum production 13-cis retinoic acid was found quite by chance totally to ablate the disease again whilst cyclosporin fresh from its triumphs in organ transplantation has been found able to suppress the rash of psoriasis it has resuscitated the debate on etiology We are therefore entering a new era in which the pharmacology and clinical pharmacology of skin are being studied as a fascinating new way of exploring questions of human physiology and pharmacology as well as an important step in the development and study of new drugs use of which will improve disease control and at the same time help to define pathological mechanisms      *Cumulated Index Medicus*, 1977      **Recent**
