many challenges to the hazard manager dynamic climatic conditions combined with population growth rapid urbanization and changing socio economic relationships are reshaping disaster impacts community responses and social safety mechanisms Indeed human vulnerability is constantly restructured by the ongoing interplay of physical social economic and political forces At the same time reducing vulnerability and enhancing community resilience require policies aimed at mitigating the consequences of disasters as they affect different locations and different groups requiring sound scientifically based research to further an understanding of the forces at play and to devise appropriate means to counter them It is within this context that this book examines evolving approaches to natural hazards Research into natural hazards has a long tradition beginning with a focus on physical processes and evolving into an interdisciplinary agenda that incorporates interactions between the physical and human environments embracing initiatives ranging from the physical to the socio economic and political It utilises various methodological approaches and technological advances employing both quantitative and qualitative procedures The papers included in this book offer insights into the development of applied hazards research as they build on previous work evolving technologies improved understandings of the factors involved and increased awareness of the needs of those who manage hazards This volume shows an appreciation for the foundation that has been set and will inspire future researchers as they look to address these very pressing social issues **Natural Hazards**
