Receptor Phosphorylation Virinder K. Moudgil, 2018-05-04 The following chapters comprise invited contributions from eminent scientists who are internationally recognized authorities on the subject The chapters have been written to provide the reader with adequate background necessary experimental details and discussion that is easy to comprehend The book has been organized into four different sections The introductory chapter is meant to briefly summarize the contributions of other authors and discuss phosphorylation of receptor systems not covered in the book in detail The chapters in the second section on protein kinases and phosphatases are quite fundamental to the process of phosphorylation and will aid the reader in appreciating the observations and discussions reported in other chapters The third and fourth sections present discussions on phosphorylation of various receptor systems which are involved in mediating actions of peptide amine and steroid hormones It is hoped that this book will serve as a valuable resource and will be useful to all workers and students in the area of receptor ligand interactions Chemoattractant Ligands and Their Receptors Richard Horuk, 2020-01-31

Chemoattractant Ligands and Their Receptors succinctly summarizes cutting edge research in the important area of chemoattraction in immunology It explains how chemoattractant molecules mobilize immune cells to ward off attack by invading pathogens both at a molecular and at a cellular level Written by acknowledged experts in the field it contains detailed molecular and structural information on each of the major chemoattractants and their receptors Its unique multidisciplinary approach encompasses biology immunology protein chemistry and molecular biology A time saving reference for both researchers and students **Peptidergic G Protein-coupled Receptors** Pierangelo Geppetti, Werner Müller-Esterl, Domenico Regoli, 1999 Peptides are a rapidly growing class of mediators whose activity regulates homeostasis as well as pathological processes Most of the peptide activated receptors belong to the superfamily of 7 transmembrane domain receptors coupled to G proteins Peptides of different sizes from a few to more than 100 aminoacids activate peptidergic receptors by interacting at specific sites that often differ from those where antagonists bind Other receptors are activated by proteases that by cleaving the receptor extracellular region unmask a tethered ligand G protein coupled receptors for chemokines represent the way of entry of the HIV virus in target cells The great impact of non peptide agonist antagonists in current and future medicine reflects these large variety of functions and modes of activation of peptidergic G protein coupled receptors **Neuroreceptor Endocytosis and Signaling in Health and Disease** Indra Mani, 2025-04-26

Steroid Receptors in Health and Disease Virinder Moudgil, 2013-03-09 During the last two decades progress in steroid hormone research has resulted in the development of new approaches to contraception as well as diagnosis and treatment of endocrine disorders and cancers Although significant advances have been made in the purification characterization immunochemistry and molecular biology of steroid receptors the precise molecular mechanism of steroid hormone action has remained obscure This book captures the detailed presentations made at the first conference on Steroid Receptors in Health and Disease held at Meadow Brook Hall Oakland University in the fall of 1987 The purpose of this international conference was to facilitate scientific exchange toward a better understanding of the mode of action of steroid hormones The scientific sessions consisted of poster presentations and state of the art lectures the latter of which make up this volume The first chapter is meant to provide the reader with a more general background of the topics covered in the book as well as to discuss certain theme related issues that are either not yet well established or accepted or are in the stage of infancy It is hoped that this volume will serve as a useful treatise for students and investigators interested in basic and clinical aspects of biological regulation by steroid hormones A task of this magnitude could not have been undertaken without the encouragement advice and continued generous assistance of the members of the scientific committee I am gratefully indebted to Drs Molecular and Cellular Biology of Insulin-like Growth Factors and Their Receptors Derek Leroith, Mohan K. Raizada, 2012-12-06 An essential element in the development and functional integrity of all organisms is intercellular communication This is achieved by the secretion of soluble messenger molecules which subsequently interact with receptor effector pathways in the responsive cells Hormones are traditionally defined as chemical messengers synthesized by endocrine glands Unlike hormones produced by endocrine glands growth factors are hormone related substances produced by many tissues and play an important role in controlling growth and development While the exact physiological roles of growth factors have yet to be elucidated they play important roles in the regulation of cellular proliferation and or differentiation during ontogenesis growth and differentiation During recent years there has been a substantial increase in research related to peptide growth factors their receptors and modes of action With the discovery and characterization of numerous growth factors it became clear that these growth factors had multiple features in common with classic hormones as well as with oncogenes Furthermore there are distinct families of growth factors based either on structural or functional similarities Basic Neurochemistry R.
