Handbook of Nautical Medicine W.H.G. Goethe, E.N. Watson, D.T. Jones, 2012-12-06 International cooperation on the health of seafarers began many years ago As early as 1921 an international convention regarding this matter was presented to governments of maritime countries for ratification The First World Health Assembly in 1948 recommended that WHO should establish with the International Labour Office a Joint Committee on the hygiene of seafarers The first session of this Committee held in 1949 defined the problems affecting the health of seamen and made a number of recommendations In the opinion of this Joint Committee the health of seamen called for international attention for a number of reasons By the nature of his work the seafarer is obliged to travel from country to country and is exposed to great variations of climate and also to any disease that may be prevalent in the port of call He may therefore become a carrier of disease so that the protection of his health is of importance not only to himself and the other members of the crew but also to the populations of other countries he visits Yet on account of the nature of his employment it is difficult to provide the seafarer with the same standard of health care that is generally available to other sections of the population

hope to further stimulate further discussions about the use of biodiversity and its implications for wildlife conservation strategies *Catalogue of the Public Documents of the [the Fifty-third] Congress [to the 76th Congress] and of All Departments of the Government of the United States* United States.
