Index Medicus, 2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings Cumulated Index Medicus, 1975 **The Blind in the United States, 1910** United States. Bureau of the Census, 1917 International Medical and Surgical Survey, 1922 *Emergencies of the Orbit and Adnexa* Bipasha Mukherjee, Hunter Yuen, 2016-12-15 This handbook on orbital lacrimal and eyelid emergencies deals with such situations in a practical manner guiding the ophthalmologists in accurate handling and making them more proficient and confident in managing vision and life threatening emergencies With 51 chapters and more than 350 images this book covers all the eye emergencies that generalist and specialist ophthalmologists can expect to come across in their day to day practices It can be argued that the

orbit can no more be called Pandora's Box because of the unpredictable nature of its contents. This perception has changed over the years due to the advent of improved diagnostic in particular imaging techniques. However, since medical residency provides very little exposure to orbital and adnexal disorders, most clinicians are inexperienced and unsure about their management. Facing an emergency situation where improper management can rapidly worsen the condition leading to blindness or even death of the patient is every ophthalmologist's nightmare. The emergent nature of these conditions does not always provide for a leeway to refer these patients to an orbit and oculoplasty specialist who are few and far between. By the time the patient reaches his destination, his vision may be irrevocably lost. The legal implications of such mismanagement can be significant too. This book is a quick and essential resource to manage and refer eye emergencies with confidence.

Axonopathy in Neurodegenerative Disease Samuel D. Crish, Robert W. Burgess, Denise M. Inman, Christine M. Dengler-Crish, Jason R. Richardson, Brett Schofield, 2019-02-05. Axons are the major output processes of neurons responsible for transmitting information to other neurons and tissues throughout the body. The 150 000 kilometers of axons make up half of the brain's volume and require a large amount of energy. Normal axon function is the product of a massive number of intra and extra cellular mechanisms working in concert. Perhaps not surprisingly, the axon is a site of vulnerability during normal aging and in disease states, although this has only been recently appreciated. Axonopathy, broadly defined as functional or structural defects in the axon or its terminal, is common across a wide range of neurodegenerative conditions including amyotrophic lateral sclerosis, Huntington's, Parkinson's and Alzheimer's diseases, glaucoma, and as a result of neurotoxin exposure or drug treatment. This Research Topic assembles a series of original research papers, reviews, and commentaries that will illustrate both the commonalities and important differences across neurodegenerative disorders. Though this collection cannot address all aspects of this topic, it is our hope that these manuscripts will educate other scientists and inspire new investigations into axon dysfunction and degeneration. *Ischemic Optic Neuropathies* Sohan Singh

Hayreh, 2011-08-28. Ischemic optic neuropathy, often referred to as a stroke of the optic nerve, is one of the major causes of visual impairment or loss of vision. Yet it is a highly controversial and confusing subject because of the general lack of in-depth scientific understanding of the subject. In this book, the leading authority in the field describes in detail the current knowledge about the different forms of the often devastating disease. Insights into the underlying pathogenesis and peculiar clinical features are given, leading the reader to the most appropriate way of management. This information will help any physician dealing with patients who suffer from sudden loss of vision. **Textbook of Contemporary Neurosurgery**
