Rigid Plastics Packaging F. Hannay, 2002 This report starts with a simple overview of materials processes and application for rigid plastics packaging and progresses to the latest developments Processing methods are described briefly in the review with an overview of each type accompanied by a discussion of forthcoming developments The properties of the different polymers and polymer grades related to packaging applications are also discussed The review is accompanied by over 400 summaries of papers from the Rapra Polymer Library

on developments in polymers processes and applications for rigid packaging Regulation of Food Packaging in Europe and the USA Derek J Knight, Lesley A Creighton, 2004 Annotation A wide variety of plastics are used in food contact applications and it is important that such plastics do not affect the food with which they come into contact The objective of food packaging legislation is to protect the consumer by controlling the contamination of food by chemicals transferred from the packaging Food packaging regulations are constantly under revision and differ significantly between Europe and the USA This report provides a clearly written summary of the current legislation surrounding the use of plastics in contact with food It discusses the plastics used in food packaging their characteristics and applications This review is accompanied by around 400 abstracts from papers and books in the Rapra Polymer Library database *Plastic Packaging Materials for Food* Otto G. Piringer, A. L. Baner, 2008-07-11 Plastics have developed into the most important class of packaging materials Their relative impermeability for substances from the surroundings has great influence on the shelf life and the quality of the packed goods At the same time the interaction between the contents and the various components of the packaging plays a decisive role This particular book is indispensable in the search for the optimal plastic packaging It facilitates the estimation of the influence on the goods which come from the surroundings and from the packaging The authors do not restrict themselves only to the description of the phenomena of diffusion or transport in theory but they show what they mean for practical applications Food represents the central theme as main area of application for plastic packaging It can be considered to be the model substance and the findings are to be applied to many other products and systems The main rules and regulations for food packaging of the European Community and the United States are presented in this book Furthermore the authors emphasize the testing methods for proving the mass transport and the sensory check of the quality of the products

Plastic Packaging Otto G. Piringer, A. L. Baner, 2008-06-25 Plastics are the most important class of packaging materials This successful handbook now in its second edition covers all important aspects of plastic packaging and the interdisciplinary knowledge needed by food chemists pharmaceutical chemists food technologists materials scientists process engineers and product developers alike This is an indispensable resource in the search for the optimal plastic packaging Materials characteristics additives and their effects mass transport phenomena quality assurance and recent regulatory requirements from FDA and European Commission are covered in detail with ample data **A Handbook of Food Packaging** Frank A. Mathlouthi, 1994-04-30 The materials used in food packaging are very often common polymers Their permeability to gases and vapours is at the origin of their barrier properties and capacity for protection of the food The permeability coefficient which is at thermodynamic equilibrium equal to the product of diffusivity and solubility depends on

the structure of the polymer as well as the properties of diffusing molecules Polymer properties affecting permeability such as free volume crystallinity tacticity cross linking orientation and thickness are reviewed as well as permeant characteristics size and shape and polarity especially for water vapour which are described in relation to their influence on permeability Different experimental methods of determination of permeability are also summarized **Food and Beverage Packaging Technology** Richard Coles, Mark J.
