Arnes, 2006 Embryonic stem cells have the ability to develop into virtually any cell in the body and may have the potential to treat medical conditions such as diabetes and Parkinson s disease In August 2001 President Bush announced that for the first time federal funds would be used to support research on human embryonic stem cells but funding would be limited to existing stem cell lines The National Institutes of Health NIH has established the Human Embryonic Stem Cell Registry which lists stem cell lines that are eligible for use in federally funded research Although 78 cell lines are listed 21 embryonic stem cell lines are currently available Scientists are concerned about the quality longevity and availability of the eligible stem cell lines For a variety of reasons many believe research advancement requires new embryonic stem cell lines and for certain applications stem cells derived from cloned embryos may offer the best hope for progress in understanding and treating disease A significant cohort of pro life advocates support stem cell research those opposed are concerned that the isolation of stem cells requires the destruction of embryos Letters from Congress one signed by 206 Members of the House and a second signed by 58 Senators have been sent urging

President Bush to expand the current federal policy concerning embryonic stem cell research Some have argued that stem cell research be limited to adult stem cells obtained from tissues such as bone marrow They argue that adult stem cells should be pursued instead of embryonic stem cells because they believe the derivation of stem cells from either embryos or aborted fetuses is ethically unacceptable Other scientists believe adult stem cells should not be the sole target of research because of important scientific and technical limitations Groups make ethical distinctions in the debate on how to proceed with stem cell research based upon embryo protection relief of suffering viability the purpose and timing of embryo creation and destruction donor consent scientific alternatives federal funding and cloning Other countries are moving fast with active research programs This book presents the current confused situation along with a selective bibliography *HADI PRACTICAL NEONATOLOGY BOOK 2* DR.ABDELHADI ABDELGABBAR ABDELHADI MBBS,MRCP,FRCPCH,2024-01-24 Hadi Practical Neonatology Hadi PN a 2 book series of practical guidelines is intended to provide a structured approach to the management of neonatal conditions which are likely to face the neonatal team It is not intended to replace neonatal textbooks or to teach the beginners in the field Prior sound knowledge of Neonatal Medicine by the user is essential This book is the second in the series It covers aspects of NEUROLOGY FLUIDS ELECTROLYTES VASCULAR ACCESS SAMPLING FREQUENT CHALLENGES HAEMATOLOGY JAUNDICE and ESSENTIAL PROCEDURES PRACTICES challenges It is my belief that neonatal doctors and nurses are an integrated team and any demarcation is an imaginary line The recipe of creating a backbone of good nurses is passionate support continuous education and practical teaching at every possible opportunity Mutual trust and appropriate delegations are crucial to the success of the team HADI PN series is written for the neonatal team and not just for the medical staff The best way for consolidating the team knowledge and experience is bedside teaching New methods and approaches of neonatal management are progressing but seem to slow down over the last 2 3 years This may reflect the fact neonatal advances are approaching our era peak of what is possible Nevertheless many of our current practices are yet to be scrutinized to fulfil the evidence based pathways and standards There is no robust verification of our current practice of many routine day to day applications This include but not limited to fluid requirements duration of antibiotics courses use of various blood products and seizures pharmacological treatment I have reviewed multiple neonatal medical and nursing guidelines from Europe North America and Australia as well as guidelines from Asia South America and Africa I integrated many aspects from these guidelines within this text whenever they are in accord with the international acceptable practices Feedback and suggestions are welcome and can be sent to neonatologypractical@gmail.com The book is an updated version of the protocols and guidelines which I have developed during my work as Consultant Neonatologist Many are adopted from various reputable institutes and modified to reflect the current evidence plus a slight flavour of my experience Considerable effort has been exercised to ensure the doses of medications given in HADI PN are accurate However further confirmation by the nursing and medical staff is advised prior to

the first use of each medication HADI PN reflects the author's own acceptable and safe practice and advice. It is written with the intention of facilitating the delivery of care to the most vulnerable newborn. The publication is written bearing in mind the wide variations in the skill mix of neonatal practitioners, nurses and doctors. Likewise, the challenging circumstances in developing countries are taken into consideration.
