Hendershot,Marjorie C. Horn,William D. Mosher,1988 The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth NSFG conducted by the National Center for Health Statistics Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15 44 A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date Overall 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years There were no statistically significant differences between white 79% black 75% or Hispanic 77% wives or between the 2 income groups The 1982 survey questions were more comprehensive than those of earlier cycles of the survey The annual rate of visits for family planning services in 1982 was 1077 visits 1000 women Teenagers had the highest annual visit rate 1581 1000 of any age group for all sources of family planning services combined Visit rates declined sharply with age from 1447 at ages 15 24 to 479 at ages 35 44 Similar declines with age also were found in the visit rates for white and black women separately Nevertheless the annual visit rate for black women 1334 1000 was significantly higher than that for white women 1033 The highest overall visit rate was for black women 15 19 years of age 1867 1000 Nearly 2 3 of all family planning visits were to private medical sources Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources as did black women age 15 24 White women age 20 and older had higher visit rates to private medical services than to clinics Never married women had higher visit rates to clinics than currently or formerly married women Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term About 1 million ever

married women had 1 or more infertility visits in the 12 months before the interview During the 3 years before interview about 1.9 million women had infertility visits For all ever married women as well as for white and black women separately infertility services were more likely to be secured from private medical sources than from clinics The survey design reliability of the estimates and the terms used are explained in the technical notes

**Testing of Metallic and Inorganic Coatings** William B. Harding, 1987 Coatings are tested to confirm compliance with specifications to monitor the operation of a coating process and to evaluate coatings for various services The ability of a coating to perform as intended usually depends on several characteristics and the testing of a coating usually involves several different tests At first glance the nature of a characteristic that is being tested may seem clear and the results of a test may seem to be unambiguous however the nature of a characteristic may be more complex than realized and the ability of a test to measure the characteristic may be less than expected The members of the ASTM Committee B 8 on Metallic and Inorganic Coatings felt it was desirable to organize a symposium on the testing of the metallic and inorganic coatings so as to bring these problems to the attention of practitioners This publication is based on the symposium which was presented in Chicago on April 14 and 15 1986

*Exploratory Study of Silicide, Aluminide, and Boride Coatings for Nitridation-oxidation Protection of Chromium Alloys* Joseph R. Stephens, William D. Klopp, 1969 Chromium alloys were coated with silicon aluminum and boron by pack cementation None of these simple coatings provided adequate nitridation oxidation protection for a chromium 0.17 wt % yttrium alloy substrate as shown by a substantial increase in the ductile brittle transition temperature after air exposure for 100 hr at 2100 degrees F 1420 K Iron modified silicides coatings afforded good protection holding the transition temperature of air exposed specimens to 3500 F 450 K compared to 200 degrees F 370 K for recrystallized uncoated specimens Additional attractive modifying elements included iron molybdenum iron molybdenum tungsten iron molybdenum tungsten titanium and vanadium molybdenum tungsten titanium

Developments in Corrosion Protection Mahmood Aliofkhazraei, 2014-02-20 One of the first things that comes to

your mind after hearing the term corrosion is corrosion of a metal Corrosion is a basically harmful phenomenon but it can be useful in some cases For instance environment s pollution with corrosion products and damage to the performance of a system are among its harmful effects whereas electric energy generation in a battery and cathodic protection of many structures are among its advantages However these advantages are almost nothing as compared to the costs and effects imposed by its detrimental influences The enormous costs of this phenomenon can be better understand through studying the published statistics on direct and indirect corrosion damages on economy of governments The direct cost of corrosion is near 3 % of the gross domestic product GDP of USA Considering this huge cost it is necessary to develop and expand the corrosion science and its protection technologies
