Problems of Radiation Genetics Nikolai Petrovich Dubinin,1962 Molecular Mechanisms of Protein Biosynthesis

Herbert Weissbach,2012-12-02 Molecular Mechanisms of Protein Biosynthesis is a collection of papers dealing with cell free systems at the molecular level including transfer RNA the initiation elongation and termination processes ribosome structure and function mRNA translation and DNA directed in vitro protein synthesis A couple of papers review tRNA aminoacyl tRNA synthetases and aspects of ribosome structure One paper discusses affinity labeling in the study of binding and catalytic sites of large complex and heterogeneous systems such as the ribosome The investigator should be aware of the chemically reactive or photoactivatable analogue reacting specifically with one or more ribosomal components This reaction should be determined if it is dependent on the correct binding of the affinity label at the functional site Another paper describes the series of reactions in protein synthesis as the process by which the ribosome moves relative to the messenger RNA Other papers discuss messenger RNA and its translation DNA dependent cell free protein synthesis as well as the genetics of the translational apparatus The collection will benefit microbiologists biotechnologists and academicians connected with the biological sciences

Nucleic Acids and Protein Synthesis in Plants L. Bogorad,2012-12-06 During the summer of 1974 we discussed the state of molecular biology and biochemical developmental biology in plants on a few occasions in Paris and in Strasbourg The number of laboratories engaged in such research is minute compared with those studying comparable problems in animal and bacterial systems but by then much interesting work had been done and a great momentum was building It seemed to us that the summer of 1976 would be a good time to review these areas of plant biology for students as well as advanced workers We outlined a program for a course to colleagues both in Europe and the United States and asked a few potential lecturers if they would be interested The response was not just positive it was overwhelmingly enthusiastic Those who had some acquaintance with Alsace and especially with Strasbourg invariably told us that they had two reasons for being enthusiastic about participating the subject and the proposed site The lectures published here reflect the diversity of current research in plant molecular biology and biochemical developmental biology Each lecture gives us a glimpse of the depth of questions being asked and sometimes answered in segments of this field of investigation This research is directed at fundamental biological problems but answers to these questions will provide knowledge essential for bringing about major changes in the way the world's agricultural enterprise can be improved The Ribosome ,2001 *Conference on Biological*
