First International Workshop on Rapid System Prototyping, 2002 Single Stage to Orbit Andrew J. Butrica, 2003-10-22 While the glories and tragedies of the space shuttle make headlines and move the nation the story of the shuttle forms an inseparable part of a lesser known but no less important drama the search for a reusable single stage to orbit rocket Here an award winning student of space science Andrew J Butrica examines the long and tangled history of this ambitious concept from its first glimmerings in the 1920s when technicians dismissed it as unfeasible to its highly expensive heyday in the midst of the Cold War when conservative backed government programs struggled to produce an operational flight vehicle Butrica finds a blending of far sighted engineering and heavy handed politics To the first and oldest idea that of the reusable rocket powered single stage to orbit vehicle planners who belonged to what President Eisenhower referred to as the military industrial complex added experimental X aircraft like capabilities and eventually a faster cheaper smaller managerial approach Single Stage to Orbit traces the interplay of technology corporate interest and politics a combination that well served the conservative space agenda and ultimately triumphed not in the realization of inexpensive reliable space transport but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty first century D M Ashford **Proceedings of the 2019 30th International Workshop on Rapid System Prototyping**, 2019

Programming Environments for Massively Parallel Distributed Systems Karsten M. Decker, Rene M. Rehmann, 2013-04-17 Massively Parallel Systems MPSs with their scalable computation and storage space promises are becoming increasingly important for high performance computing The growing acceptance of MPSs in academia is clearly apparent However in industrial companies their usage remains low The programming of MPSs is still the big obstacle and solving this software problem is sometimes referred to as one of the most challenging tasks of the 1990s The 1994 working conference on Programming Environments for Massively Parallel Systems was the latest event of the working group WG 10.3 of the International Federation for Information Processing IFIP in this field It succeeded the 1992 conference in Edinburgh on Programming Environments for Parallel Computing The research and development work

discussed at the conference addresses the entire spectrum of software problems including virtual machines which are less cumbersome to program more convenient programming models advanced programming languages and especially more sophisticated programming tools but also algorithms and applications 12th International Workshop on Rapid System Prototyping ,2001 Second International Workshop on Rapid System Prototyping ,2002
