Rat Brain In Stereotaxic Coordinates The New Coronal Set:

The Rat Brain in Stereotaxic Coordinates - The New Coronal Set George Paxinos, Charles Watson, 2004-12-03 The preceding editions made *The Rat Brain in Stereotaxic Coordinates* the second most cited book in science. This Fifth Edition is the result of years of research providing the user with the drawings of the completely new set of coronal sections now from one rat and with significantly improved resolution by adding a third additional section level as compared to earlier editions. Numerous new nuclei and structures also have been identified. The drawings are presented in two color providing a much better contrast for use. The Fifth Edition continues the legacy of this major neuroscience publication and is a guide for all students and scientists who study the rat brain. 161 coronal diagrams based on a single brain. Delineations drawn entirely new from a new set of sections. Diagrams spaced at constant 120 μ m intervals resulting in the high resolution and convenience of use. Drawings use blue color lines and black labels to facilitate extraction of information. The stereotaxic grid was derived using the same techniques that produced the widely praised stereotaxic grid of the previous editions. Over 1000 structures identified a number for the first time in this edition.

The Rat Brain in Stereotaxic Coordinates George Paxinos, Charles Watson, 2013-10-22 *The Rat Brain in Stereotaxic Coordinates* provides an atlas of the rat brain. The main features of this atlas are:

- 1 It is based on the flat skull position and bregma lambda or the midpoint of the interaural line can be used as a reference point.
- 2 The atlas is based on the study of 130 adult male Wistar rats with a weight range of 270-310 g. It is suitable for brains of 250-350 g male rats.
- 3 It represents all areas of the brain and spinal cord and brain areas are shown in coronal, sagittal and horizontal planes. The brain sections shown were taken at 0.5 mm intervals and were stained with either cresyl violet or for the demonstration of acetylcholinesterase (AChE).
- 4 It is based on fresh brains frozen in the skull using deeply anaesthetized rats in order to overcome distortion produced by fixation and to enhance staining contrast.
- 5 Structures are delineated on the basis of data on cytoarchitecture, connectivity, histochemistry and development. The book is intended for researchers and graduate students in the neurosciences. Senior undergraduates should also find the atlas a useful adjunct to readings and lectures in brain anatomy and function.

Paxinos & Watson the Rat Brain in Stereotaxic Coordinates, 2005
