Rational Descriptions, Decisions and Designs Myron Tribus, 2013-10-22 Rational Descriptions Decisions and Designs is a reference for understanding the aspects of rational decision theory in terms of the basic formalism of information theory The text provides ways to achieve correct engineering design decisions The book starts with an understanding for the need to apply rationality as opposed to uncertainty in design decision making Inductive logic in computers is explained where the design of the machine and the accompanying software are considered The text then explains the functional equations and the problems of arriving at a rational description through some mathematical preliminaries Bayes equation and rational inference as tools for adjusting probabilities when something new is encountered in earlier probability distributions are explained The book presents as well a case study concerning the error made in following specifications of spark plugs The author also explains the Bernoulli trials where a probability that a better hypothesis than that already adopted may exist The rational measure of uncertainty and the principle of maximum entropy with sample calculations are included in the text After considering the probabilities the decision theory is taken up where engineering design follows Examples regarding transmitter and voltmeter designs are presented The book ends by explaining probabilities of success and failure as applied to reliability engineering that it is a state of knowledge rather than the state of a thing The text can serve as a textbook for students in technology engineering and design and as a useful reference for mathematicians statisticians and fabrication engineers

Architecting A Knowledge-Based Platform for Design Engineering 4.0 Zhenjun Ming, Anand Balu Nellippallil, Ru Wang, Janet K. Allen, Guoxin Wang, Yan Yan, Farrokh Mistree, 2022-02-10 Design Engineering for Industry 4 0 DE4 0 represents the human cyber physical view of the systems realization ecosystem that is necessary to accommodate the drivers of Industry 4 0 IoX and provide an open ecosystem for the realization of complex systems Seamless integration of digital threads and digital twins throughout the product design the development and fulfillment lifecycle the ability to accommodate diverse and rapidly changing technologies and the mechanisms to facilitate the creation of new opportunities for the design of products processes services and systems are some of the desired characteristics of DE4 0 Jiao R Commuri S Panchal J Milisavljevic Syed J Allen J K Mistree F and Schaefer D Design Engineering in the Age of Industry 4 0 ASME Journal of Mechanical Design 143 7 070801 25 pages In keeping with the Design Engineering 4 0 construct the authors describe architecting a computer platform to support human designers make decisions associated with the realization of complex engineered systems The platform is designed to facilitate end to end digital integration customization and personalization agile collaboration networks open innovation co creation and crowdsourcing product servitization and anything as a service Recognizing that simulation models are abstractions of reality the authors opt for a satisficing strategy instead of an optimization strategy They include fundamentals and then describe tools for architecting a knowledge based platforms for decision support Challenges associated with developing a computational platform for decision support for the realization of

complex engineered systems in the context of Design Engineering 4.0 are identified. Constructs for formulating design decisions e.g. selection compromise and coupled decisions knowledge modelling schemes e.g. ontologies and modular templates diagrams for designing decision workflows e.g. the PEI-X diagram and some analytical methods for robust design under uncertainty are presented. The authors describe integrating the knowledge based platform to architect a cloud based platform for decision support promoting co design and cloud based design communication essential for mass collaboration and open innovation for Design Engineering 4.0. This book is a valuable resource for researchers design engineers and others working on pushing the boundary of digitized manufacturing to include Design Engineering 4.0 principles in designing products processes and services.

A Student's Introduction to Engineering Design Harold A. Simon, 2014-05-18. A Student's Introduction to Engineering Design aims to provide students with little or no sufficient knowledge on the fundamentals of engineering. The text is divided into two parts: Book I and Book II. The first part is concerned with the discussion on the design process which characterizes the essence of engineering. The specific topics encompassed in this part include the morphology and anatomy of design. Other areas of concern of this part are the needs and information modeling values and alternatives analysis and computation and optimization. The second part of the book brings the theories concepts and formulations discussed in the first part to the real world setting. The role of engineering in the development of the society and in addressing human needs is explained. The selection is best for those new in the field of engineering.

Elementary Heat Transfer Analysis Stephen Whitaker, 2014-05-18. Elementary Heat Transfer Analysis provides information pertinent to the fundamental aspects of the nature of transient heat conduction. This book presents a thorough understanding of the thermal energy equation and its application to boundary layer flows and confined and unconfined turbulent flows. Organized into nine chapters this book begins with an overview of the use of heat transfer coefficients in formulating the flux condition at phase interface. This text then explains the specification as well as application of flux boundary conditions. Other chapters consider a derivation of the transient heat conduction equation. This book discusses as well the convective energy transport based on the understanding and application of the thermal energy equation. The final chapter deals with the study of the processes of heat transfer during boiling and condensation. This book is a valuable resource for Junior or Senior engineering students who are in an introductory course in heat transfer.

Nuclear Energy Raymond L. Murray, 2014-05-09. Nuclear Energy: An Introduction to the Concepts Systems and Applications of Nuclear Processes introduces the reader to the concepts systems and applications of nuclear processes. It provides a factual description of basic nuclear phenomena as well as devices and processes that involve nuclear reactions. The problems and opportunities that are inherent in a nuclear age are also highlighted. Comprised of 27 chapters this book begins with an overview of fundamental facts and principles with emphasis on energy and states of matter atoms and nuclei and nuclear reactions. Radioactivity radiation and nuclear fusion and fission are then examined along with the operating principles of

radiation equipment nuclear reactors and other systems involving nuclear processes Nuclear devices such as particle accelerators isotope separators and radiation detectors are described Subsequent chapters focus on the relation between nuclear energy and peaceful applications Finally attention is directed to the subjects of radiation protection beneficial usage of isotopes and the connection between energy resources and human progress This monograph will be of interest to those who wish to know about the role of nuclear energy in society or to learn nuclear concepts for use in professional work
