Decoding Hindu Chronology Henry Romano, Since

ancient times the Hindus have had a lunisolar cycle based on the combination of solar and lunar years determined by the course of the sun and the moon but with the lunar year beginning near the solar year Exactly how their earliest Calendar was arranged remains a mystery Our focus is on the current form of their Calendar developed around 400 under the influence of Greek astronomy and introduced into India at no long time There are two kinds of Hindu years solar and lunar To understand the lunar Calendar we will first explain the solar year which governs the lunisolar system Bengal including Madras s Orissa Tamil and Malayalam districts used solar years for civil purposes General religious rites and festivals are regulated by the lunar year and the details of private and domestic life such as choosing auspicious occasions for marriages and journeys choosing lucky moments for shaving etc Almanacs that follow the lunar year contain details about the solar year such as the sun s course through the zodiac signs Despite following the solar year almanacs include lunar year details The astronomical solar year determines the civil solar year According to the latter the Calendar begins at the vernal equinox but actually starts at the vernal equinox Because of the rotation of the equinoxes in Western astronomy the zodiac signs correspond to the astronomical solar because they are drawn away extensively from the constellations from which they derive their names Therefore the sun now comes to the vernal equinox before the beginning of Aries not in the constellation Aries but at the end of Pisces From A D 499 522 or 527 referring to different schools when according to their system the signs aligned with the constellations the Hindus disregarded precession about their Calendar According to them Aries begins at or near the star Piscium Hence their astronomical solar year is in fact not the tropical year in the course of which the sun passes from one vernal equinox to the next but a sidereal year the period during which the earth makes one whole rotation in its orbit around the sun regarding the first point of Mesha its start is the moment of the Mesha Sankranti when the sun enters Mesha rather than Aries and it begins not with the actual equinox but with an artificial

Morphologies of Asia and Africa Alan S. Kaye, 2007-06-23

In 1997 Eisenbrauns published the highly regarded two-volume *Phonologies of Asia and Africa* edited by Alan Kaye with the assistance of Peter T. Daniels and the book rapidly became the standard reference for the phonologies of the Afro-Asiatic languages

Now the concept has been extended and Kaye has assembled nearly 50 scholars to write essays on the morphologies of the same language group

The coverage is complete, copious, and again will likely become the standard work in the field

Contributors are an international Who's Who of Afro-Asiatic linguistics from Appleyard to Leslau to Voigt

It is with great sadness that we report the death of Alan Kaye on May 31, 2007, while these volumes were in the final stages of preparation for the press

Alan was diagnosed with bone cancer on May 1 while on research leave in the United Arab Emirates and was brought home to Fullerton by his son on May 22
