Secondary Analysis Of The Timss Data:

Secondary Analysis of the TIMSS Data David F. Robitaille, Albert E. Beaton, 2002-09-30 The goal of this volume is to use the data from IEA's Third International Mathematics and Science Study TIMSS to investigate significant questions related to mathematics and science education as well as a number of methodological issues. The authors of the papers included in this collection come from eleven of the TIMSS countries and they are prominent in their respective fields. The book will be of interest to readers interested in comparative education, mathematics and science education curriculum and survey research methodology. A study such as TIMSS costs a great deal of money to carry out and if the true value of that investment is to be realized, much more research of the kind reported in this collection is needed. The papers included provide insights into the impact that TIMSS has had in the participating countries. They also serve as excellent examples of the kind of follow-up research that is needed. Secondary Analysis of the TIMSS Data David F. Robitaille, Albert E.

Beaton, 2005-12-19 Researchers who participate in IEA studies have a unique opportunity to work collaboratively with their counterparts from many different countries and disciplinary backgrounds over a period of several years on questions of shared academic interest. Once the data for a given study have been collected and the first round of international reports published, however, opportunities for that kind of collaboration tend to be much less frequent. A major strength of IEA studies compared to other large-scale international studies is that they are classroom-based, thereby making it possible for researchers and policy makers to investigate linkages between students' achievement and a wide range of variables. Those variables could be related to instructional practices, to students and teachers' background and attitudes to school, organizational patterns, or to opportunity to learn, to name a few. The research questions that TIMSS was designed to address make it clear that these kinds of relational, multi-variate analyses were among the major goals of the project. The international reports of the TIMSS 95 results that were published by the International Study Center at Boston College between 1996 and 1999 were intended to provide comprehensive coverage of the basic findings of the study. They were not intended to provide in-depth analyses of research and policy issues; instead, their main purpose was to make the basic findings of the study widely available in a timely manner. This they certainly did. Next Steps for TIMSS National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Board on International Comparative Studies in Education, 1999-01-01 Now that the initial results of The Third International Mathematics and Science Study TIMSS have been released, the Board on International Comparative Studies in Education (BICSE) has turned its attention to what happens next. The TIMSS data are potentially useful to researchers, policy makers, practitioners, and others interested in evidence regarding factors that influence student learning. But although the study has produced a remarkable volume of intriguing data, it is by no means complete. Scholarly review of the initial data evaluations, of claims based on the data, and of follow-up secondary analysis based on the primary findings are all integral parts of a study of this magnitude, but the bulk of this very

important work has not yet begun Because of the board's serious concern that this necessary work has not been undertaken or funded it held a workshop on June 17 and 18 1998 to explore different perspectives on possible next steps The workshop was an invaluable opportunity for the board to explore issues and questions it has addressed over the years and to solidify its thinking about many of them Because the board is convinced of the importance of moving forward with the TIMSS data it presents in this report both recommendations as to what ought to be done and many of the innovative specific ideas that emerged from the workshop These recommendations reflect the board's conviction based on its many years of involvement with and deliberations about TIMSS that this study is an extremely rich resource for the policy scholarly and practice communities and that all of these groups have a responsibility to take full advantage of it The recommendations and discussion in this report are intended to assist both researchers and funders who are considering further work with TIMSS and a broader audience of researchers policy makers practitioners and others who have followed the TIMSS results and are eager to use them This report is in a sense the culmination of many years of effort for the board *Secondary Analysis of the TIMSS-R Data for Hong Kong* Frederick Koon Shing Leung, 2002 **Education Statistics Quarterly**, 2001

Methodological Advances in Cross-National Surveys of Educational Achievement National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Board on Testing and Assessment, Board on International Comparative Studies in Education, 2002-06-14 In November 2000 the Board on International Comparative Studies in Education BICSE held a symposium to draw on the wealth of experience gathered over a four decade period to evaluate improvement in the quality of the methodologies used in international studies and to identify the most pressing methodological issues that remain to be solved Since 1960 the United States has participated in 15 large scale cross national education surveys The most assessed subjects have been science and mathematics through reading comprehension geography nonverbal reasoning literature French English as a foreign language civic education history computers in education primary education and second language acquisition The papers prepared for this symposium and discussions of those papers make up the volume representing the most up to date and comprehensive assessment of methodological strengths and weaknesses of international comparative studies of student achievement These papers answer the following questions 1 What is the methodological quality of the most recent international surveys of student achievement How authoritative are the results 2 Has the methodological quality of international achievement studies improved over the past 40 years and 3 What are promising opportunities for future improvement **Using Secondary Data In Educational And Social Research** Smith, Emma, 2008-09-01 This comprehensive guide introduces students to the use of secondary data in educational and social research and provides a practical resource for researchers who are new to the field of secondary data analysis **Research Methods in the Social Sciences** Bridget Somekh, Cathy Lewin, 2005 In this book the contributors introduce all the key qualitative and quantitative research methodologies and methods and draw readers into a

Applied Rasch Measurement: A Book of Exemplars Sivakumar Alagumalai, David D. Curtis, Njora Hungi, 2006-03-30 While the primary purpose of the book is a celebration of John's contributions to the field of measurement a second and related purpose is to provide a useful resource. We believe that the combination of the developmental history and theory of the method the examples of its use in practice some possible future directions and software and data files will make this book a valuable resource for teachers and scholars of the Rasch method. This book is a tribute to Professor John P. Keeves for the advocacy of the Rasch model in Australia. Happy 80th birthday John! There are good introductory texts on Item Response Theory Objective Measurement and the Rasch model. However for a beginning researcher keen on utilising the potentials of the Rasch model theoretical discussions of test theory and associated indices do not meet their pragmatic needs. Furthermore many researchers in measurement still have little or no knowledge of the features of the Rasch model and its use in a variety of situations and disciplines. This book attempts to describe the underlying axioms of test theory and in particular the concepts of objective measurement and the Rasch model and then link theory to practice. We have been introduced to the various models of test theory during our graduate days. It was time for us to share with those keen in the field of measurement in education psychology and the social sciences the theoretical and practical aspects of objective measurement.

Teaching Mathematics in Secondary Schools Linda Haggarty, 2002 The importance placed on mathematics in the school curriculum can hardly be over estimated. This book is concerned with exploring the bigger picture of mathematics education.
