Psychophysics Beyond Sensation Christian Kaernbach, Erich Schröger, Hermann Müller, Hermann Müller, Erich Schröger, 2004-05-20 This volume presents a series of studies that expand laws invariants and principles of psychophysics beyond its classical domain of sensation This book's goal is to demonstrate the extent of the domain of psychophysics ranging from sensory processes through sensory memory and short term memory issues to the interaction between sensation and action The dynamics and timing of human performance are a further important issue within this extended framework of psychophysics Given the similarity of the various cortical areas in terms of their neuroanatomical structure it is an important question whether this similarity is paralleled by a similarity of processes These issues are addressed by the contributions in the present volume using state of the art research methods in behavioral research psychophysiology and mathematical modeling The book is divided into four sections Part I presents contributions concerning the classical domain of psychophysical judgment The next two parts are concerned with elementary and higher order processes and the concluding section deals with psychophysical models The sections are introduced by guest editorials contributed by independent authors These editorials present the authors' personal view on the respective section providing an integrated account of the various contributions or highlighting their focus of interest among them While also voicing their own and sometimes different point of view they contribute to the process of discussion that makes science so exciting This volume should be of great interest to advanced students in neuroscience cognitive science psychology neuropsychology and related areas who seek to evaluate the range and power of psychological work today Established scientists in those fields will also appreciate the variety of issues addressed within the same methodological framework and their multiple interconnections and stimulating cross talk

The Psychoses Jacques Lacan, 2013-11-19 During the third year of his famous seminar Jacques Lacan gives a concise definition of psychoanalysis Psychoanalysis should be the science of language inhabited by the subject From the Freudian point of view man is the subject captured and tortured by language Since psychosis is a special but emblematic case of language entrapment Lacan devotes much of this year to grappling with distinctions between the neuroses and the psychoses As he compared the two relationships symmetries and contrasts emerge that enable him to erect a structure for psychosis Freud's famous case of Daniel Paul Schreber is central to Lacan's analysis In demonstrating the many ways that the psychotic is

inhabited possessed by language Lacan draws upon Schreber's own account of his psychosis and upon Freud's notes on this case of paranoia The analysis of language is both fascinating and enlightening The Measurement of Sensation C. Principles of Receptor Physiology Werner R. Loewenstein, 2013-03-07 Why should there be a handbook of sensory physiology and if so why now The editors have asked this question marshalled all of the arguments that seemed to speak against their project and then discovered that most of these arguments really spoke in favor of it there seemed to be no doubt that the attempt should be made and that it should be made now No complete overview of sensory physiology has been attempted since Bethe's *Handbuch der normalen und pathologischen Physiologie* nearly forty years ago Since then the field has evolved with unforeseen rapidity Although electric probing of single peripheral nerve fibers was begun by ADRIAN and ZOTTERMAN as early as 1926 in the somatosensory system and extended to single optic nerve fibers by HARTLINE in 1932 the real upsurge of such single unit studies has only come during the last two decades Single cell electrophysiology has now been applied to all sensory modalities and on almost every conceivable phylogenetic level It has begun to clarify peripheral receptor action and is adding to our understanding of the central processing of sensory information In parallel with these developments there have been fundamental studies of the physics and chemistry of the receptors themselves these studies are leading to insights into the mechanisms of energy transduction and nerve impulse initiation

Sensation and Measurement H.R. Moskowitz,B. Scharf,J.C. Stevens,2012-12-06 We planned this book as a Festschrift for Smitty Stevens because we thought he might be retiring around 1974 although we knew very well that only death or deep illness would stop Smitty from doing science Death came suddenly unexpectedly after a full day of skiing at Vail Colorado on the annual trip with wife Didi to the Winter Conference on Brain Research Smitty liked winter conferences near ski resorts and often tried to get us other psychophysicists to organize one Every person is unique Smitty would have said it s mainly because each of us has so many genes that two combinations just alike would be well nigh impossible But most of us strive in many ways to be like others and to abide by the norms some smaller number try even harder to be unlike other people as a result many persons seem to lose their uniqueness their individuality Not Smitty He tried neither to be like others nor to be different He took himself as he found himself and ascribed peculiarities strengths and weaknesses to his pioneering Utah forebears in whom he took much pride His was the true and right nonconformity He approached each task each problem ready to grapple with the facts and set them into meaningful order And if the answer he came up with was different from everyone else s well that was too bad
