Shaping Of Social Organization Social Rule System Theory With Applications:

The Shaping of Social Organization Tom R Burns, Helena Flam, 1987-07 The Shaping of Social Organization introduces a new social theory social rule system theory and shows how it can provide fresh insights into the major institutions of modern social life The book advances a distinctive approach to the study of actor structure dynamics placing itself in a rich scholarly tradition developed by major thinkers such as Weber Lindblom Giddens and Goffman It presents social rule system theory as a framework with which to investigate social institutions and clarifies the principles behind their formation maintenance and transformation Drawing on a wide range of case studies the authors also demonstrate the relevance of the theory for research programs As a result they are ab The Shaping of Social Organization Tom R. Burns, Helena Flam, 1987

Rule Systems Theory Helena Flam, Marcus Carson, 2008 Explaining the complexity of social life remains the central challenge of the social sciences This book offers a variety of theoretical empirical explorations and applications inspired by an important neo institutional approach to tackling this complexity the rule systems theory Its point of departure is the assumption that institutions and cultural formations possess causal powers and relative autonomy constraining and enabling people s social actions and interactions Structural and cultural properties of society are carried by transmitted and reformed by human agents whose interactions generate reproduce elaborate and transform structures The contributors are highly accomplished economists sociologists and political scientists who come from the US and several European countries The book is meant as a Festschrift for Tom Burns a central figure in the development of the rule systems theory **The Shaping of Socio-Economic Systems (RLE Social Theory)** Thomas Baumgartner, Tom Burns, Philippe DeVile, 2014-08-07 Actor systems dynamics is an innovative multidisciplinary methodology for investigating and analyzing social struggles over economic resources and the related interplay between economic and socio political institutions and processes The authors sociologists and economists offer a systemic perspective on contemporary socio economic issues such as economic crisis unemployment inflation economic democracy and development in their analyses they identify several of the key factors that drive people to interact to initiate change and transformation as well as to resist such change Major underlying themes in the book are Conflict over the distribution of economic resources and economic policies and institutions the structural bases of economic inequality and conflict the shaping and reshaping of socio economic institutions and the contradictions conflicts and instabilities evoked by such developments the failure of orthodox economic theories including Keynesianism in the face of recurrent economic crises and instabilities the development and application of an open dynamic actor oriented systems theory grounded in the social sciences addressing complex socio economic phenomena in ways diverging substantially from conventional economics All in all the papers collected here deal on the one hand with social power conflict and struggle concerning economic resources and institutions and on the other hand the structural and other factors which drive powering initiatives conflict and social innovation and transformation The book is addressed to a broad spectrum of social and

managerial scientists concerned with socio economic issues institutions and development , **The Social Organization of Disease** Jochen Kleres, 2017-07-06 Empirically this book is a case study analysis of dissolution processes in German AIDS organizations Indeed why is it that civic organizers start out with a commitment to a cause but end up dissolving their organization This question is exactly what Kleres seeks to tackle within The Social Organization of Disease Focusing on the emotional bases of dissolved German AIDS organizations to develop a typology of civic action and organizing Kleres presents a perspective on non profit organizations that analyses organizational development through the emotional sense making of individual organizers within the light of larger political processes and cultural contexts To this end this volume develops and applies a new methodology for researching emotions empirically expanding the scope of narrative analysis However parallel to this The Social Organization of Disease also explores how shifting discursive processes establish emotional climates and thus impact on state policies and the evolution of AIDS organizing The book would appeal to sociologists and political scientists working in the field of social movements and non profit organisations but it would also appeal to those who are interested in the sociology of emotions It would potentially be of interest to non profit scholars who consider community based organizations volunteerism and advocacy and secondarily to medical sociologists interested in AIDS service organizations Sociology International relations Social Work Political Science May be of interest for NGO activists and or employees and leadership

Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a

perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Rough-Neural Computing Sankar Kumar Pal, Lech Polkowski, 2012-12-06 Soft computing comprises various paradigms dedicated to approximately solving real world problems e g in decision making classification or learning among these paradigms are fuzzy sets rough sets neural networks genetic algorithms and others It is well understood now in the soft computing community that hybrid approaches combining various paradigms are very promising approaches for solving complex problems Exploiting the potential and strength of both neural networks and rough sets this book is devoted to rough neuro computing which is also related to the novel aspect of computing based on information granulation in particular to computing with words It provides foundational and methodological issues as well as applications in various fields

Women, Sexuality and the Changing Social Order Beth Maina Ahlberg, 2022-05-14 This book first published in 1991 examines the effect of government policies and social restrictions on the reproductive behaviour and family life of the women of Kenya especially the Kikuyu people Importation of techniques for social and behavioural regulation from the developed nations the social restructuring that followed the colonial intervention the Mau Mau uprisings

and current widespread concern with AIDS have disrupted traditional influences on Kenyan reproductive behaviour and family life In response to these changes women mobilised into a movement comprised of small local women s groups scattered throughout Kenya that attempt to educate and influence both its members and government policy The successes and failures of this movement offer important lessons for the rest of Africa and the developing world

Power At Work Marcel van der Linden,Nicole Mayer-Ahuja,2023-07-04 Between working men and women which may include free wage earners chattel slaves indentured labourers sharecroppers domestic servants and many others and those employing them there has always been a constant mostly silent but sometimes overt struggle concerning employers discretionary power and over the interpretation of formal and informal rules There is a constantly shifting frontier of control that is an ongoing struggle for control in the workplace with managers and supervisors trying to increase their power over their subordinates and their subordinates in reaction trying to maintain and increase their relative autonomy The detailed case studies in this volume span three centuries and cover different parts of the world Still they speak to each other in many ways highlighting the fact that power at work whether on the shopfloor or beyond results from a wide range of complex interrelations Between technological innovations and the ways in which they are actually implemented Between the division of labour at the site of production or service provision and changing standards of social segmentation beyond the premises of the company which can be reinforced or weakened by management strategies of utilizing labour power as well as workers reaction to these strategies And finally between politics in production which shape the relations between capital and labour on the shopfloor and state politics of production which cannot be understood without reference to broader developments in economy and society

The Transition to Smart Mobility Leander Kauschke,2023-10-19 Most contemporary notions of the fairly recent concept smart mobility portray an imminent transition of similar socio economic consequences as the shift from horses to automobiles did 100 years ago Present book thus offers an in depth look at the variables involved in the equation of smart mobility acceptance 1 and envisaged institutional change 2 Both views are embedded in the Multi Level Perspective Study 1 develops a structural equation model in SmartPLS Use cases cover eBikes N 537 mobility as a service N 531 and fully automated vehicles N 558 Based on the results acceptance relies on five factors performance expectancy facilitating conditions social influence habit and hedonic motivation Study 2 applies the Institutional Role Model IRM to better understand system dynamics Thus the smart mobility ecosystem is mapped in a structured manner It identifies nine institutions as well as four technical and four economic roles Results of interviews with experts N 8 support the IRM s significance as a vision provider for a new mobility regime In the end these two perspectives amalgamate This opens a sophisticated space for public debate about the commencing transition to smart mobility

Climate Change and the Crisis of Capitalism Mark Pelling, David Manuel-Navarrete, Michael Redclift, 2012-08-21

Are established economic social and political practices capable of dealing with the combined crises of climate change and the global economic system Will falling back on the wisdoms that contributed to the crisis help us to find ways forward or simply reconfigure risk in another guise This volume argues that the combination of global environmental change and global economic restructuring require a re thinking of the priorities processes and underlying values that shape contemporary development aspirations and policy This volume brings together leading scholars to address these questions from several disciplinary perspectives environmental sociology human geography international development systems thinking political sciences philosophy economics and policy management science The book is divided into four sections that examine contemporary development discourses and practices It bridges geographical and disciplinary divides and includes chapters on innovative governance that confront unsustainable economic and environmental relations in both developing and developed contexts It emphasises the ways in which dominant development paths have necessarily forced a separation of individuals from nature but also from society and even from self These three levels of alienation each form a thread that runs through the book There are different levels and opportunities for a transition towards resilience raising questions surrounding identity governance and ecological management This places resilience at the heart of the contemporary crisis of capitalism and speaks to the relationship between the increasingly global forms of economic development and the difficulties in framing solutions to the environmental problems that carbon based development brings in its wake Existing social science can help in not only identifying the challenges but also potential pathways for making change locally and in wider political economic and cultural systems but it must do so by identifying transitions out of carbon dependency and the kind of political challenges they imply for reflexive individuals and alternative community approaches to human security and wellbeing

Climate Change and the Crisis of Capitalism contains contributions from leading scholars to produce a rich and cohesive set of arguments from a range of theoretical and empirical viewpoints It analyses the problem of resilience under existing circumstances but also goes beyond this to seek ways in which resilience can provide a better pathway and template for a more sustainable future This volume will be of interest to both undergraduate and postgraduate students studying Human Geography Environmental Policy and Politics

Mafia Organizations Maurizio Catino, 2019-02-07

How do mafias work How do they recruit people control members conduct legal and illegal business and use violence Why do they establish such a complex mix of rituals rules and codes of conduct And how do they differ Why do some mafias commit many more murders than others This book makes sense of mafias as organizations via a collative analysis of historical accounts official data investigative sources and interviews Catino presents a comparative study of seven mafias around the world from three Italian mafias to the American Cosa Nostra Japanese Yakuza Chinese Triads and Russian mafia He identifies the organizational

architecture that characterizes these criminal groups and relates different organizational models to the use of violence Furthermore he advances a theory on the specific functionality of mafia rules and discusses the major organizational dilemmas that mafias face This book shows that understanding the organizational logic of mafias is an indispensable step in confronting them

Dynamics of Interorganisational Collaborative Relationships Sandra Schruijer, 2020-11-13 In all spheres of life relationships among public and private organizations are built in order to deal with complex societal problems and to address economic challenges that cannot be dealt with by single organizations Because of the interdependencies interorganizational collaboration is essential yet working across organizational boundaries is far from simple It involves a multitude of different organizations each having its own interests perspectives and identities while also varying in power and size Further the societal problems that are dealt with are often severe This volume focuses on the relational complexities of interorganizational collaboration captured by the term dynamics referring to a the social and psychological processes that occur when organizations and their representatives interact to engage in cross boundary or collaborative work e g trust and distrust intergroup stereotyping and conflict conflict avoidance inclusion and exclusion of stakeholders power dynamics as well as b the development of these processes over time in view of external and internal events and or as a consequence of deliberate interventions to enhance collaborative success The perspective put forward is largely psychological and sociological both in terms of understanding the group and intergroup processes as well as efforts to intervene to develop collaborative relationships based on action research and an organizational development approach
