Views of Medical Education and Medical Care John H. Knowles, 1968 **Time to Heal** Kenneth M. Ludmerer M.D., 1999-11-11

Already the recipient of extraordinary critical acclaim this magisterial book provides a landmark account of American medical education in the twentieth century concluding with a call for the reformation of a system currently handicapped by managed care and by narrow self centered professional interests Kenneth M Ludmerer describes the evolution of American medical education from 1910 when a muck raking report on medical diploma mills spurred the reform and expansion of medical schools to the current era of managed care when commercial interests once more have come to the fore compromising the training of the nation s future doctors Ludmerer portrays the experience of learning medicine from the perspective of students house officers faculty administrators and patients and he traces the immense impact on academic medical centers of outside factors such as World War II the National Institutes of Health private medical insurance and Medicare and Medicaid Most notably the book explores the very real threats to medical education in the current environment of managed care viewing these developments not as a catastrophe but as a challenge to make many long overdue changes in medical education and medical practice Panoramic in scope meticulously researched brilliantly argued and engagingly written Time to Heal is both a stunning work of scholarship and a courageous critique of modern medical education The definitive book on the subject it provides an indispensable framework for making informed choices about the future of medical education and health care in America

Publication Catalog of the U.S. Department of Health, Education, and Welfare United States. Department of Health, Education, and Welfare. Media and Publication Management Information Staff, 1978 Educating Doctors Stewart Wolf, 2018-01-18 At a time when medical care for the people of the United States is undergoing wrenching change due mainly to vast and costly technological progress doctors have had to cede much of their initiative and responsibility to third parties Medicine has become a commercial enterprise Patients must affiliate themselves with a managed health care organization in order to have access to their doctors In the hurly burly of today's techno medicine many physicians are too busy to spend time in dialogue with their patients As a consequence social and emotional circumstances that have been thoroughly documented to affect physiology and susceptibility to disease are overlooked Stewart Wolf here critiques the medical establishment and the way those concerned with its various responsibilities discharge them He puts medicine's responsibilities to society into historical perspective relating it to social changes He begins with the ways medical candidates are selected He continues with commentary on currently designed teaching and learning the qualities required in a physician and in a medical scientist and the nature and challenges of disease and what can be done about them Finally Wolf provides a useful way of thinking about human biology to better understand why people become sick or well and what people have to contend with to stay well Throughout he emphasizes the role of the brain in controlling behavior of all sorts general and visceral Wolf emphasizes the regulatory power of the nervous system as it perceives and evaluates life experiences and influences learning behavior and susceptibility to disease Wolf's goal is not to supply a recipe for the achievement of better health but to encourage a better understanding of ourselves and the paths toward health Educating Doctors reexamines the responsibilities goals and activities of the medical establishment As such it is a must read for policymakers sociologists and professionals working in the medical field
