Visuomotor Coordination Jorg Peter Ewert, Michael A. Arbib, 2013-06-29 Various brain areas of mammals can phylogenetically be traced back to homologous structures in amphibians The amphibian brain may thus be regarded as a kind of microcosm of the highly complex primate brain as far as certain homologous structures sensory functions and assigned ballistic pre planned and pre programmed motor and behavioral processes are concerned A variety of fundamental operations that underlie perception cognition sensorimotor transformation and its modulation appear to proceed in primate s brain in a way understandable in terms of basic principles which can be investigated more easily by experiments in amphibians We have learned that progress in the quantitative description and evaluation of these principles can be obtained with guidance from theory Modeling supported by simulation is a process of transforming abstract theory derived from data into testable structures Where empirical data are lacking or are difficult to obtain because of structural constraints the modeler makes assumptions and approximations that by themselves are a source of hypotheses If a neural model is then tied to empirical data it can be used to predict results and hence again to become subject to experimental tests whose resulting data in turn will lead to further improvements of the model By means of our present models of visuomotor coordination and its modulation by state dependent inputs we are just beginning to simulate and analyze how external information is represented within different brain structures and how these structures use these operations to control adaptive behavior
