Opportunities In The Hydrologic Sciences:

Opportunities in the Hydrologic Sciences National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Water Science and Technology Board, Committee on Opportunities in the Hydrologic Sciences, 1991-01-01 Hydrology the science of water is central to our understanding of the global environment and its many problems Opportunities in the Hydrologic Sciences explains how the science of water historically has played second fiddle to its applications and how we now must turn to the hydrologic sciences to solve some of the emerging problems This first book of its kind presents a blueprint for establishing hydrologic science among the geosciences Informative and well illustrated chapters explore what we know about the forces that drive the global water system highlighting promising research topics in hydrology's major subfields The book offers specific recommendations for improving hydrologic education from kindergarten through graduate school In addition a chapter on the basics of the science is interesting for the scientist and understandable to the lay reader This readable volume is enhanced by a series of brief biographical sketches of past leaders in the field and fascinating vignettes on important applied problems from the relevance of hydrology to radioactive waste disposal to the study of ancient water flows on Mars The volume concludes with a report on current research funding and an outline of strategies for scientists and professional societies to advance the field

Hydrologic Sciences National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Water Science and Technology Board, Proceedings of the 1997 Abel Wolman Distinguished Lecture and Symposium on the Hydrologic Sciences, 1998-12-11 Hydrologic science an important interdisciplinary science dealing with the occurrence distribution and properties of water on Earth is key to understanding and resolving many contemporary large scale environmental issues The Water Science and Technology Board used the opportunity of its 1997 Abel Wolman Distinguished Lecture to assess the vitality of the hydrologic sciences by the hydrologic community The format included focus by lecturer Thomas Dunne on the intellectual vitality of the hydrologic sciences followed by a symposium featuring several invited papers and discussions Hydrologic Sciences is a compilation of the Wolman Lecture and the papers preceded by a summarizing overview The volume stresses a number of needs for furtherance of hydrologic science including development of a coherent body of transferable theory and an intellectual center for the science communication across multiple geo and environmental science disciplines appropriate measurements and observations and provision of central guidance for the field

Thriving on Our Changing Planet National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Decadal Survey for Earth Science and Applications from Space, 2019-01-20 We live on a dynamic Earth shaped by both natural processes and the impacts of humans on their environment It is in our collective interest to observe and understand our planet and to predict future behavior to the extent possible in order to effectively manage resources successfully respond to threats from natural and human induced environmental change and capitalize on the opportunities social economic security and more that such knowledge can bring By continuously monitoring and exploring Earth developing a deep understanding of its evolving behavior and characterizing the processes that shape and reshape the environment in which we live we not only advance knowledge and basic discovery about our planet but we further develop the foundation upon which benefits to society are built *Thriving on Our Changing Planet* presents prioritized science applications and observations along with related strategic and programmatic guidance to support the U S civil space Earth observation program over the coming decade

What is Water? Jamie Linton, 2010 We all know what water is and we often take it for granted Because it seems so natural we seldom question how we see water But the spectre of a worldwide water crisis suggests that there might be something fundamentally wrong with the way we think about water Jamie Linton dives into the history of the modern concept of water that water can be stripped of its wider environmental social and cultural contexts and reduced to a scientific abstraction to mere H₂O This abstraction has given modern society licence to dam divert and manipulate water with impunity

giving rise to a growing suite of problems Linton argues that part of the solution to the water crisis involves deliberately reinvesting water with social content *An Agenda of Science for Environment and Development Into the 21st Century* James Dooge, Maureen Brennan, 1992-05-28 The world scientific community's definitive statement on strategies needed to safeguard the environment and promote development **Encyclopedia of Hydrological Sciences** M.
