The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series The History of the Study of Landforms or the Development of Geomorphology Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the

revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century. It is divided into three sections: the first deals with changes in approach and method, the second with changes in ideas and the broader scientific context within which geomorphology is studied, and the final section details advances in research on processes and landforms. The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty-first century geomorphology.

Geochemical Sediments and Landscapes David J. Nash, Sue J. McLaren, 2011-07-18 This state-of-the-art volume reviews both past work and current research with contributions from internationally recognized experts. The book is organized into fourteen chapters and designed to embrace the full range of terrestrial geochemical sediments. An up-to-date and comprehensive survey of research in the field of geochemical sediments and landscapes. Discusses the main duricrusts including calcrete, laterite, and silcrete. Considers deposits precipitated in various springs, lakes, caves, and near coastal environments. Considers the range of techniques used in the analysis of geochemical sediments, representing a significant advance on previous texts.

Linking Diagenesis to Sequence Stratigraphy Sadoon Morad, Marcelo Ketzer, Luis F. de Ros, 2012-11-07 Sequence stratigraphy is a powerful tool for the prediction of depositional porosity and permeability but does not account for the impact of diagenesis on these reservoir parameters. Therefore, integrating diagenesis and sequence stratigraphy can provide a better way of predicting reservoir quality. This special publication consists of 19 papers, reviews, and case studies exploring different aspects of the integration of diagenesis and sequence stratigraphy in carbonate, siliciclastic, and mixed carbonate-siliciclastic successions from various geological settings. This book will be of interest to sedimentary petrologists aiming to understand the distribution of diagenesis in siliciclastic and carbonate successions, to sequence stratigraphers who can use diagenetic features to recognize and verify interpreted key stratigraphic surfaces, and to petroleum geologists who wish to develop more realistic conceptual models for the spatial and temporal distribution of reservoir quality. This book is part of the International Association of Sedimentologists (IAS) Special Publications. The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists. Papers are reviewed and printed to the same high standards as those published in the journal *Sedimentology*, and several of these volumes have become standard works of reference.

Southern African Geomorphology Peter Holmes, Michael Meadows, 2013-01-06 This book covers the geomorphology and landscape evolution of South Africa, focusing on arid landscapes, fluvial systems, karst, Quaternary landscapes, macro-scale geomorphic evolution, coastal geomorphology, and applied geomorphology. It would appeal to postgraduate students in Physical Geography, Geomorphology, and Physical Geology, and all academics in the earth sciences.

Arid Zone Geomorphology David S. G. Thomas, 2011-03-14 The new edition of *Arid Zone Geomorphology* aims to encapsulate the advances that have been made in recent years in the investigation and explanation of landforms and geomorphological processes in drylands. Building on the success of the previous two editions, the Third Edition has been

completely revised and updated to reflect the latest developments in the field Whilst this latest edition will remain a comprehensive reference to the subject the book has been restructured to include regional case studies throughout to enhance student understanding and is clearly defined into five distinct sections Firstly the book introduces the reader to Large Scale Controls and Variability in Drylands and then moves on to consider Surface Processes and Characteristics The Work of Water The Work of the Wind The book concludes with a section on Living with Dryland Geomorphology that includes a chapter on geomorphological hazards and the human impact on these environments Once again recognised world experts in the field have been invited to contribute chapters in order to present a comprehensive and up to date overview of current knowledge about the processes shaping the landscape of deserts and arid regions In order to broaden the appeal of the Third Edition the book has been reduced in extent by 100 pages and the Regional chapters have been omitted in favour of the inclusion of key regional case studies throughout the book The Editor is also considering the inclusion of a supplementary website that could include further images problems and case studies

Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically It begins with an overview of global deserts proceeds through treatments of weathering hillslopes rivers piedmonts lake basins and aeolian surfaces and concludes with a discussion of the role of climatic change Written by a team of international authors all of whom are active in the field the chapters cover the spectrum of desert geomorphology

Reservoir Quality of Clastic and Carbonate Rocks P.J. Armitage, A.R. Butcher, J.M. Churchill, A.E. Csoma, C. Hollis, R.H. Lander, J.E. Omma, R.H. Worden, 2018-06-18 Reservoir quality is studied using a wide range of similar techniques in both sandstones and carbonates Sandstone and carbonate reservoir quality both benefit from the study of modern analogues and experiments but modelling approaches are currently quite different for these two types of reservoirs There are many common controls on sandstone and carbonate reservoir quality but also distinct differences due primarily to mineralogy Numerous controversies remain

including the question of oil inhibition the key control on pressure solution and geochemical flux of material to or from reservoirs This collection of papers contains case study based examples of sandstone and carbonate reservoir quality prediction as well as modern analogue outcrop analogue modelling and advanced analytical approaches

Carbonate Systems During the Oligocene-Miocene Climatic Transition Maria Mutti, Werner E. Piller, Christian Betzler, 2011-06-13 The Oligocene and Miocene Epochs comprise the most important phases in the Cenozoic global cooling that led from a greenhouse to an icehouse Earth Recent major advances in the understanding and time resolution of climate events taking place at this time as well as the proliferation of studies on Oligocene and Miocene shallow water neritic carbonate systems invite us to re-evaluate the significance of these carbonate systems in the context of changes in climate and Earth surface processes Carbonate systems because of a wide dependence on the ecological requirements of organisms producing the sediment are sensitive recorders of changes in environmental conditions

on the Earth surface The papers included in this Special Publication address the dynamic evolution of carbonate systems deposited during the Oligocene and Miocene in the context on climatic and Earth surfaces processes focusing on climatic trends and controls over deposition temporal changes in carbonate producers and palaeoecology carbonate terminology facies processes and environmental parameters including water temperature and production depth profiles carbonate producers and their spatial and temporal variability and tectonic controls over architecture This book is part of the International Association of Sedimentologists IAS Special Publications The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists Papers are reviewed and printed to the same high standards as those published in the journal Sedimentology and several of these volumes have become standard works of reference

Analogue and Numerical Modelling of Sedimentary Systems Poppe de Boer, George Postma, Kees van der Zwan, Peter Burgess, Peter Kukla, 2009-01-26 Understanding basin fill evolution and the origin of stratal architectures has traditionally been based on studies of outcrops well and seismic data studies of and inferences on qualitative geological processes and to a lesser extent based on quantitative observations of modern and ancient sedimentary environments Insight gained on the basis of these studies can increasingly be tested and extended through the application of numerical and analogue forward models Present day stratigraphic forward modelling follows two principle lines 1 the deterministic process based approach ideally with resolution of the fundamental equations of fluid and sediment motion at all scales and 2 the stochastic approach The process based approach leads to improved understanding of the dynamics physics of the system increasing our predictive power of how systems evolve under various forcing conditions unless the system is highly non linear and hence difficult or perhaps even impossible to predict The stochastic approach is more direct relatively simple and useful for study of more complicated or less well understood systems Process based models more than stochastic ones are directly limited by the diversity of temporal and spatial scales and the very incomplete knowledge of how processes operate and interact on the various scales The papers included in this book demonstrate how cross fertilization between traditional field studies and analogue and numerical forward modelling expands our understanding of Earth surface systems

Sedimentary Processes, Environments and Basins Gary Nichols, Edward Williams, Chris Paola, 2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter s research interests and are all important areas of current research in sedimentary geology There are both case studies and review articles on these themes which

reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences

Glacial Sedimentary Processes and Products Michael J. Hambrey, Poul Christoffersen, Neil F. Glasser, Bryn Hubbard, 2009-03-05 Associating ice masses with the transport and deposition of sediments has long formed a central theme in glaciology and glacial geomorphology. The reason for this focus is clear in that ice masses are responsible for much of the physical landscape which characterizes the Earth's glaciated regions. This association also holds at a variety of scales for example from the grain size characteristics of small scale moraines to the structural architecture of large scale glacially sedimentary sequences in both surface and subaqueous environments. This volume brings numerous state of the art research contributions together each relating to a different physical setting, spatial scale, process or investigative technique. The result is a diverse and interesting collection of papers by glaciologists, numerical modellers and glacial geologists which are all linked by the theme of investigating the relationships between the behaviour of ice masses and their resulting sedimentary sequences.

Rivers and Floodplains John S. Bridge, 2009-04-01 *Rivers and Floodplains* is concerned with the origin, geometry, water flow, sediment transport, erosion and deposition associated with modern alluvial rivers and floodplains, how they vary in time and space and how this information is used to interpret deposits of ancient rivers and floodplains. There is specific reference to the types and lifestyles of organisms associated with fluvial environments, human interactions with rivers and floodplains, associated environmental and engineering concerns as well as the economic aspects of fluvial deposits, particularly the modeling of fluvial hydrocarbon reservoirs and aquifers. Methods of studying rivers and floodplains and their deposits are also discussed. Although basic principles are emphasized, many examples are detailed. Particular emphasis is placed on how an understanding of the nature of modern rivers and floodplains is required before any problems concerning rivers and floodplains, past or present, can be addressed rationally. *Rivers and Floodplains* is designed as a core text for senior undergraduate and graduate students studying modern or ancient fluvial environments, particularly in earth sciences, environmental sciences and physical geography, but also in civil and agricultural engineering. College teachers, researchers and practising professionals will also find the book an invaluable reference. Presents a process based approach which is relevant to modern curricula. Discusses methods of studying rivers and floodplains and their deposits. Provides many detailed examples throughout the text. Emphasises the basic principles of this subject. As the first synthesis of this entire field, it will be a must have for all students studying modern or ancient fluvial environments. Teachers, researchers and practising professionals will find this an invaluable reference tool. *Rivers and Floodplains* will also be of interest to geologists, geographers and engineers.

Landscapes and Landforms of Botswana Frank D. Eckardt, 2022-05-17 This volume contains 22 chapters introducing a wide range of semi arid and geologic landscapes. Botswana, a thinly populated nation the size of France, is a Southern African keystone country at the heart of the Kalahari, sharing some of the major sub continental drainage basins such as the Limpopo, Zambezi, Orange and Okavango with its neighbouring countries. The extensive Kalahari

Sand surface has been sculptured by numerous past processes which have produced subtle but regional landforms consisting of extensive dunes and shorelines Incipient rifting has created the dynamic Okavango and Makgadikgadi fan basin systems which produces iconic wetlands with a world heritage status Geological outcrops in particular to the east expose highly denuded basement lithologies which produces numerous inselbergs that are home to a rich archaeological heritage The book also examines the geomorphology of mineral and water resources which sustain the economy and population and also features dedicated chapters that cover diamondiferous kimberlites caves pans dams duricrusts and wildlife Chapter 6 is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)
