Protein Degradation in Health and Disease Michele Reboud-Ravaux,2012-12-06 Protein degradation has been identified as a major mechanism for the regulation of cellular functions Not surprisingly its deregulation is implied in almost any pathological condition This book describes how aged proteins are eliminated during cell metabolism how cell proliferation is regulated by protein degradation and how its deregulation can contribute to the development of cancer how protein degradation is modified during normal and abnormal aging in particular with regard to Alzheimer s disease and other degenerative diseases of the brain and central nervous system Attempts aiming at correcting these pathologies by interfering with deviations of the normal pathway of protein degradation are also treated

Proteases New Perspectives Vito Turk,2012-12-06 This book provides an account of the recent advances in our understanding of the role of proteases under physiological and pathological conditions It reviews the contributions that have been made in the fields of biochemistry molecular biology medicine agriculture and ecology In addition there is an account of the growing number of practical applications in biotechnology reflecting the fact that peptidases are major targets for medical and agricultural purposes The book shows how the numerous protease structures are essential for drug design The contributions place special emphasis on cysteine aspartic and metalloproteases and their role in physiological and certain pathological states Another focus is the classification and nomenclature of peptidases and a review of those proteases currently under the most intensive investigation The book provides an informative introduction for teachers and newcomers to the field such as graduate students while providing a valuable source of material and ideas for the academic and industrial researcher in areas

including biochemistry medicine agriculture and biotechnology *Cumulated Index Medicus* ,1989 *Proteinase and Peptidase Inhibition* H. John Smith,Claire Simons,2002-03-28 Cellular proteinases and their physiological role in normal and disease states have been the subject of great interest recently Proteinase and Peptidase Inhibition presents new reports on a wide range of cellular proteinases whose inhibitors may hold the key to the development of new drugs It deals with enzyme classes inhibitor types and regulatory mechanisms governing proteinase activity Target enzymes are fully described and classified by structural similarity rather than by pharmacological effects This is a valuable reference for academic and industrial researchers in medicinal chemistry drug design and development pharmacology biochemistry and molecular and cell biology **Stories of Success** ,2007-11-20 This book is the latest volume in the highly successful series Comprehensive Biochemistry It provides a historical and autobiographical perspective of the developments in the field through the contributions of leading individuals who reflect on their careers and their impact on biochemistry Volume 45 is essential reading for everyone from graduate student to professor placing in context major advances not only in biochemical terms but in relation to historical and social developments Readers will be delighted by the lively style and the insight into the lives and careers of leading scientists of their time Contributors are distinguished scientists in the field Unique series of personal recollections Presents scientific research in a historical perspective **Proteolysis in Cell Functions** Väinö K. Hopsu-Havu,Mikko Järvinen,Heidrun Kirschke,1997 The proteolytic enzymes have an essential function in all cells Their activities are regulated by the rate of synthesis activation of proenzymes and by the rate of synthesis of their inhibitors They are synthesized in ribosomes like any other proteins and transported to various storage organelles or secreted from the cells and are activated in the pericellular space or in interstitium Various cells and tissues have their characteristic enzyme patterns which serve their specific functions Proteolytic enzymes take part and often have a regulatory role in numerous phases of cell function e g cell division migration apoptotic as well as necrotic cell death etc Diseases in which proteolysis has been subject of active research are e g cancer metastasis viral infections e g HIV and Alzheimer s disease They are also an essential part in any tissue remodelling wound healing throughout the kingdom of fauna and flora *Proteasome Inhibitors in Cancer Therapy* Julian Adams,2004-05-25 A panel of leading academic and pharmaceutical investigators takes stock of the remarkable work that has been accomplished to date with proteasome inhibitors in cancer and examines emerging therapeutic possibilities The topics range from a discussion of the chemistry and cell biology of the proteasome and the rationale for proteasome inhibitors in cancer to a review of current clinical trials underway The discussion of rationales for testing proteasome inhibitors in cancer models covers the role of the proteasome in NF kB activation the combining of conventional chemotherapy and radiation with proteasome inhibition notably PS 341 new proteasome methods of inhibiting viral maturation and the role of proteasome inhibition in the treatment of AIDS The authors also document the development of bortezomib Velcade™ in Phase I clinical trials and in a multicentered Phase II clinical trials in patients with relapsed and

refractory myeloma The Proteasomal System in Aging and Disease Tilman Grune, 2012-07-05 This volume of Progress in Molecular Biology and Translational Science discusses cutting edge research of proteasomes and proteasome associated proteins and cellular systems The volume is split into two sections The first part discusses the current knowledge of the structure function and regulation of the proteasomal system The second part describes the role of the proteasome in aging and disease Contributions from leading authorities Informs and updates on all the latest developments in the field The Proteasome in Neurodegeneration Leonidas Stefanis, J. N. Keller, 2007-08-02 In the last 50 years a wealth of information has allowed us to understand the contribution of various regulatory factors that alter mRNA and protein synthesis to a variety of physiological and pathological conditions However such regulation is only one of many factors that contribute to the levels of a given protein One major factor that has been relatively obscure until recently has been the contribution of protein degradation to the regulation of the steady state level of protein expression and protein function This rapidly evolving field has made a significant mark on the scientific community as highlighted by the Award of the Nobel Prize in Chemistry for 2004 to Aaron Ciechanover Avram Hershko and Irwin Rose for their pioneering work on the ubiquitin proteasome system UPS of protein degradation which is the subject of this volume In recent years evidence has been accumulating that suggests a role for UPS function in both physiological and pathological settings In particular studies have implicated a central role for the UPS in cell cycle regulation cancer and neurodegeneration Two points are however worth bearing in mind First ubiquitin's function appears to extend far beyond the UPS and protein degradation second there are other important systems of intracellular protein degradation most notably autophagic systems through the lysosomes and these may also be involved in disease pathophysiology *Handbook of Proteolytic Enzymes* Alan J. Barrett, Neil D. Rawlings, J. Fred Woessner, 2012-10-30 Extensively revised and updated the new edition of the highly regarded Handbook of Proteolytic Enzymes is an essential reference for biochemists biotechnologists and molecular biologists Edited by world renowned experts in the field this comprehensive work provides detailed information on all known proteolytic enzymes to date This two volume set unveils new developments on proteolytic enzymes which are being investigated in pharmaceutical research for such diseases as HIV Hepatitis C and the common cold Volume I covers aspartic and metallo peptidases while Volume II examines peptidases of cysteine serine threonine and unknown catalytic type A CD ROM accompanies the book containing fully searchable text specialised scissile bond searches 3 D color structures and much more The only comprehensive book on proteolytic enzymes Includes 671 chapters each written by experts in their field on proteolytic enzymes from all groups of living organisms and the viruses including those that are currently major targets of pharmaceutical research Accompanying CD ROM provides fully searchable text 2D structures of peptidases in color and links directly to PubMed and MEROPS databases Each chapter describes in detail the enzyme name its history activity and specificity structural chemistry preparation biological aspects and distinguishing features Over 1000 peptidases included *MHC Molecules: Expression, Assembly and Function* Robert

G. Urban, Roman M. Chicz, 2012-12-06 3 nan expression systems have been used to make MHC molecules containing a single peptide of interest To date fifteen single peptide class I structures incorporating three different HLA and two different H 2 allotypes isotypes and four additional class II structures two single peptide complexes and two superantigen complexes have been reported These advances have enabled us to study the atomic detail of antigen presentation and the general mechanisms behind peptide binding and begin to construct models of T cell recognition Another area of research which has exploded over the past five years has been the identification of MHC associated peptides There are several methods one can use to determine the sequence identity of MHC restricted peptides Historically the most successful technique albeit crude and encumbered with serious limitations has been the use of overlapping synthetic peptides and T cell clones Unfortunately this method absolutely requires i knowledge of the target antigen ii availability of T cell clones and iii a relatively short overall length for the target source protein such that a set of overlapping peptides can be affordably synthesized Briefly the entire sequence of the target protein is chemically synthesized using overlapping peptides which are then screened for biological activity using standard T cell presentation assays Despite its limitations this method was used to identify the first immunodominant epitopes reported in the literature and continues to be used successfully today
