Protecting Biological Diversity Roles And Responsibilities:

Protecting Biological Diversity Gilles Seutin, Catherine Jeanne Potvin, Margaret Kraenzel, 2001 The most species rich regions of the globe the tropics are economically the poorest How can biologists work toward effective protection for endangered species in countries hungry for food and basic resources And why should local people in those countries trust the advice of scientists from wealthier countries who have broken their promises in the past and have typically shown little respect for the cultural values of others

Protecting Biological Diversity Gilles Seutin, Catherine Jeanne Potvin, Margaret Kraenzel, 2001 The most species rich regions of the globe the tropics are economically the poorest How can biologists work toward effective protection for endangered species in countries hungry for food and basic resources And why should local people in those countries trust the advice of scientists from wealthier countries who have broken their promises in the past and have typically shown little respect for the cultural values of others Catherine Potvin Margaret Kraenzel and Gilles Seutin asked scientists from developing countries to summarize their experiences of international collaboration and to suggest attitudes and practices that would lead to more fruitful exchanges with northern scientists They also asked scholars to provide an analytical framework in which these issues could be discussed and to identify possible solutions to questions such as What are the responsibilities of first world scientists involved in conservation actions in developing countries How can biologists work toward the protection of bio diversity while being respectful of the human desire for a better future The resulting papers analyse specific situations encountered in countries such as Democratic Republic of Congo Madagascar India and Panama and discuss the philosophical basis for environmental research They also examine the work of two institutions whose projects in developing countries have been particularly effective through outreach and attention to local values and needs and who propose a pluralistic view of conservation biology ethics

Protecting Biological Diversity Carmen Richerzhagen, 2013-04-15 During the last ten years the enormous global loss of biodiversity has received remarkable attention Among the numerous approaches undertaken to stop or lessen this process access and benefit sharing ABS a market based approach has emerged as among

the most prominent In theory ABS turns biodiversity and genetic resources from an open access good to a private good and creates a market for genetic resources It internalizes the resources positive externalities by pricing the commercial values for research and development and makes users pay for it Users benefits are shared with the resource holders and set incentives for the sustainable use and the conservation of biodiversity Carmen Richerzhagen however finds that in practice there are significant questions about the effectiveness of the approach in the protection of biodiversity and about the fair and equitable sharing of benefits arising from the commercialization Utilizing the empirical findings of three case studies of biodiversity providing countries Costa Rica the Philippines and Ethiopia and one case study of a community of user countries the European Union EU Richerzhagen examines the effectiveness of ABS through the realization of its own objectives

Protection of the Environment and the Role of the United Nations Rajendra Ramlogan, 2022-11-12 This book provides a comprehensive review of the roles played by the various programmes autonomous organisations specialised agencies and departments of the United Nations in assisting the developing world in attaining environmental objectives It would be seen that almost all the various components of the United Nations have embraced environmental protection as part of their portfolios This indicates the growing investment by the United Nations in the environment particularly in developing countries The evidence would suggest that the absence of coordination and rationalisation of activities may undermine the ability of the United Nations to deliver effective and efficient environmental assistance to developing countries Ultimately this book proposes a drastic restructuring of the United Nations insofar as environmental matters are concerned hoping that scarce international funds will be well utilised and provide better money for value in environmental investment in developing countries

The Routledge Handbook of Philosophy of Biodiversity Justin Garson, Anya Plutynski, Sahotra Sarkar, 2016-10-04 Biological diversity or biodiversity is the degree of variation of life within an ecosystem It is a relatively new topic of study but has grown enormously in recent years Because of its interdisciplinary nature the very concept of biodiversity is the subject of debate amongst philosophers biologists geographers and environmentalists The Routledge Handbook of Philosophy of Biodiversity is an outstanding reference source to the key topics and debates in this exciting subject Comprising twenty three chapters by a team of international contributors the Handbook is divided into six parts Historical and sociological contexts focusing on the emergence of the term and early attempts to measure biodiversity What is biodiversity How should biodiversity be defined How can biodiversity include entities at the edge of its boundaries including microbial diversity and genetically engineered organisms Why protect biodiversity What can traditional environmental ethics contribute to biodiversity Topics covered include anthropocentrism intrinsic value and ethical controversies surrounding the economics of biodiversity Measurement and methodology including decision theory and conservation the use of indicators for biodiversity and the changing use of genetics in biodiversity conservation Social contexts and global justice including conservation and

community conflicts and biodiversity and cultural values Biodiversity and other environmental values How does biodiversity relate to other values like ecological restoration or ecological sustainability Essential reading for students and researchers in philosophy environmental science and environmental studies and conservation management it will also be extremely useful to those studying biodiversity in subjects such as biology and geography

Governing Global Biodiversity Philippe G. Le Prestre, 2017-05-15 Predictions about the success of the Convention on Biological Diversity CBD are pessimistic It has now become commonplace to bemoan the scope ambition and deeply political nature of a convention that addresses issues ranging from ecosystems protection to the exploitation of genetic resources from conservation to justice and from commerce to scientific knowledge Ten years after its adoption how can we assess the difference that the CBD has made Is it in danger of collapsing under its own weight or is it building the foundations of new patterns of relations between societies and nature What achievements can we record and what challenges does it face In this book which is unique in its scope diversity and the wealth of information it contains contributors from a variety of academic disciplines
