Subcommittee on Toxic Substances and Environmental Oversight, 1981      **Protecting the Ozone Layer** Edward Parson, 2003 Providing an account of the ozone depletion issues from the attempts to develop international action in the 1970s to the mature functioning of the international regime this book examines the parallel developments of politics and negotiations technological progress and industry strategy that shaped the issue s development and its management      *Stratospheric Ozone and Man* Frank A. Bower, 2018-01-10 The book as originally conceived was to be limited to technical considerations but the scientific course of event has been so interwoven with non scientific but nevertheless related events the authors felt necessary to include an account of this situation Accordingly the book is divided into five sections entitled Stratospheric ozone Atmospheric processes influencing stratospheric ozone Does man influence stratospheric ozone Effects and research Public policy      EPA Proposed Rulemaking on Chlorofluorocarbons (CFCs) and Its Impact on Small Business United States. Parson, 2003-03-06 This book is the first comprehensive history of international efforts to protect the ozone layer the greatest success yet achieved in managing human impacts on the global environment Its arguments about how this success was achieved are both theoretically novel and of great significance for the management of other global problems particularly global climate change The book provides an account of the ozone depletion issues from the first attempts to develop international action in the 1970s to the mature functioning of the present international regime It examines the parallel developments of politics and negotiations scientific understanding and controversy technological progress and industry strategy that shaped the issue s development and its effective management In addition the book offers important new insights into how the interactions among these domains influenced the formation and adaptation of the ozone regime Addressing the initial formation of the regime the book argues that authoritative scientific assessments were crucial in constraining policy debates and shaping negotiated agreements Assessments gave scientific claims an ability to change policy actors behavior that the claims themselves however well known and verified lacked Concerning subsequent adaptation of the regime the book identifies a series of feedbacks between the periodic revision of chemical controls and the strategic responses of affected industries which drove rapid application of

new approaches to reduce ozone depleting chemicals These feedbacks promoted by the regime s novel technology assessment process allowed worldwide use of the chemicals to decline further and faster than even the boldest predictions by nearly 95 percent within ten years Report on the Progress of Regulations to Protect Stratospheric Ozone ,1979
