Decision Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution

Health Effects of Low Radiation 2003, 2002-10 This CD rom contains 28 papers presented to the BNES international conference on the health effects of low level radiation This conference is the fourth in the highly successful series and its aim is to present the fundamental radiobiological and dosimetric information relevant to understanding the current debate on the health effects of exposure to ionizing radiations at low doses and dose rates It is also intended to provide a forum for discussion of the latest developments in this area and their relevance to the radiological protection of human health and the environment

IAEA Bulletin, 1999 **Nuclear Decommissioning, Waste Management, and Environmental Site Remediation** Colin Bayliss, Kevin Langley, 2003-10-10 Decommissioning nuclear facilities is a relatively new field which has developed rapidly in the last ten years It involves materials that may be highly radioactive and therefore require sophisticated methods of containment and remote handling The wastes arising from decommissioning are hazardous and have to be stored or disposed of safely in order to protect the environment and future generations Nuclear

GIS for Emergency Preparedness and Health Risk Reduction

David J. Briggs, Pip Forer, Lars Järup, Richard Stern, 2012-12-06 Geographical Information Systems GIS have developed rapidly in recent years and now provide powerful tools for the capture manipulation integration interrogation modelling analysis and visualisation of data tools that are already used for policy support in a wide range of areas at almost all geographic and administrative levels This holds especially for emergency preparedness and health risk reduction which are all essentially spatial problems To date however many initiatives have remained disconnected and

uncoordinated leading to less powerful less compatible and less widely implemented systems than might otherwise have been the case The important matters discussed here include the probabilistic nature of most environmental hazards and the semi random factors that influence interactions between these and human exposures the effects of temporal and spatial scales on hazard assessment and imputed risk the effects of measurement error in risk estimation and the stratification of risks and their impacts according to socioeconomic characteristics and the quantification of socioeconomic differences in vulnerability and susceptibility to environmental hazards *Environmental Science (Vol - 2)* Mr. Rohit Manglik,2023-06-23 In this book pollution types their effects and environmental management practices are presented *Fundamentals of Nuclear Science - Application in Agriculture* H. Chandrasekharan,Navindu Gupta,2006 This book is based on the compilation of lecture notes on nuclear techniques in agriculture and biology prepared and updated for students of PG School IARI New Delhi during the past 16 years The book contains three parts namely Fundamentals of Nuclear Science covering the basic features Applications comprising essential application with focus on agriculture and Appendices consisting of bibliography nuclear terms radioactive decay charts select constants and abbreviations used Salient Features Language is lucid and informal Unique in terms of its contents and 88 illustrations and 11 photographs that simplify and encourage the readers in understanding the approach and theory Recent developments in Nuclear Magnetic Resonance have been discussed Provides a comprehensive view of the potentialities of nuclear science and its application Contains clarity and high level of precision in presenting the subject matter A detailed bibliography for further reading Detail contents at the beginning facilitate quick revision Can be used either as a textbook or for supplementary reading in colleges universities and research institutions dealing with applications of nuclear techniques Would be of immense help to the academic community at large In short the flawless presentation on various aspects of nuclear applications is expected to enrich biologists and agricultural scientists to easily understand not only the basic concepts but also essentials on the application of the nuclear energy in a variety of ways for research and in agriculture Introduction to Health Physics Herman Cember,1996 Recognized as a key contribution to the field in its previous editions this edition serves as a major text guidebook which offers students a background and basic understanding of the biophysical bases of radiation radiation safety standards and the key factors in radiation protection
