Methods - Getting IT Right Lars-Henrik Eriksson, Peter A. Lindsay, 2003-08-02 This volume contains the proceedings of the 2002 symposium Formal Methods th Europe FME 2002 The symposium was the 11 in a series that began with a VDM Europe symposium in 1987 The symposia are traditionally held every 18 months In 2002 the symposium was held at the University of Copenhagen as part of the 2002 Federated Logic Conference FLoC 2002 which brought together in one event seven major conferences related to logic in computer science as well as their related workshops tutorials and tools exhibitions Formal Methods Europe www.fmeurope.org is an independent association which aims to stimulate the use of and research on formal methods for software development FME symposia have been notably successful in bringing together a community of users researchers and developers of precise mathematical methods for software development The theme of FME 2002 was Formal Methods Getting IT Right The double meaning was intentional On the one hand the theme acknowledged the significant contribution formal methods can make to Information Technology by enabling computer systems to be described precisely and reasoned about with rigour On the other hand it recognized that current formal methods are not perfect and further research and practice are required to improve their foundations applicability and effectiveness *Testing of Communicating Systems* Bernd Baumgarten, Heinz-Jürgen Burkhardt, Alfred Giessler, 2013-06-05 This volume contains the proceedings of the IFIP WG 6.1 International Workshop on Testing of Communicating Systems IWTCS 96 held in Darmstadt Germany on September 9 through 12 1996 continuing the IFIP WG 6.1 series of International Workshops on Protocol Test Systems IWPTS In this series of working conferences held annually since 1988 many valuable contributions have been presented with an emphasis both on the OSI conformance testing methodology and framework as well as the standardization effort on formal methods in conformance testing While there are still open issues and divergencies between theory and practice in these fields the scope of the series started expanding to related fields of growing practical relevance for example to testing with regard to the B-ISDN protocol reference model in particular ATM the ODP reference model and the Internet protocol suite as well as to interoperability testing and performance testing To reflect the extended scope the program committee agreed on a new name for this series of working conferences to be applied the first time to the 1996 conference However in order to emphasize the tradition of IWPTS the numbering of this series was continued such that IWTCS 96 is counted as the 9th International Workshop on Testing of Communicating Systems As in the years before the workshop aims at bringing together researchers and practitioners furthering the exchange of views and correlating the work of both sides **Tools and Algorithms for the Construction and Analysis of Systems** Kurt Jensen, Andreas Podelski, 2004-03-09 This volume contains the proceedings of the 10th International Conference on Tools and Algorithms for the Construction and Analysis of Systems TACAS 2004 TACAS 2004 took place in Barcelona Spain from March 29th to April 2nd as part of the 7th European Joint Conferences on Theory and Practice of Software ETAPS 2004 whose aims organization and history are detailed in a foreword by the ETAPS Steering Committee Chair José Luiz Fiadeiro TACAS is a forum for researchers developers and users

interested in rigorously based tools for the construction and analysis of systems The conference serves to bridge the gaps between different communities including but not limited to those devoted to formal methods software and hardware verification static analysis programming languages software engineering real time systems and communication protocols that share common interests in and techniques for tool development In particular by providing a venue for the discussion of common problems heuristics algorithms data structures and methodologies TACAS aims to support researchers in their quest to improve the utility reliability flexibility and efficiency of tools for building systems

TACAS seeks theoretical papers with a clear link to tool construction papers

describing relevant algorithms and practical aspects of their implementation papers giving descriptions of tools and associated methodologies and case studies with a conceptual message

LOTOSphere: Software Development with LOTOS

Tommaso Bolognesi, Jeroen van de Lagemaat, Chris Vissers, 2012-12-06 LOTOS Language Of Temporal Ordering Specification became an international standard in 1989 although application of preliminary versions of the language to communication services and protocols of the ISO OSI family dates back to 1984 This history of the use of LOTOS made it apparent that more advantages than the pure production of standard reference documents were to be expected from the use of such formal description techniques LOTOSphere Software Development with LOTOS describes in depth a five year project that moved LOTOS out of the ISO tower into software engineering practice LOTOS became a vehicle for efficient yet formally based industrial software specification design verification implementation and testing LOTOSphere Software Development with LOTOS is divided into six parts The first introduces the reader to LOTOS and the project LOTOSphere The five remaining each treat an important part of the software development life cycle using LOTOS This is the first book to give a comprehensive treatment of the use of these formal description techniques in a software engineering environment It will thus be a valuable reference for researchers and software developers and can also be used as a text for an advanced course on the subject

Protocol Conformance Testing Using Unique Input/output Sequences Hsiao Sun, 1997 This book deals with conformance testing for verification and validation of protocols for communication distributed computer systems The reader is introduced to this topic using the Finite State Machine FSM model together with a comprehensive review of past and current work A detailed treatment of graph approaches for vector generation and fault coverage evaluation is presented using examples with real protocols Qualitative and quantitative measures are introduced to quantify and compare these approaches inclusive of the length of the generated test sequence and fault detection capabilities Different techniques such as the Rural Chinese Postman Tour and compaction by test overlapping are fully analyzed for achieving the desired figures of merit Novel analytical frameworks such as the fault model and the test sequence generation are proposed to facilitate a better understanding of the conformance testing process for the practicing engineer as well as an academic audience
