Proton-antiproton Collider Physics G. Altarelli,L. Di Lella,L. DiLella,1989 This volume reviews the physics studied at the CERN proton antiproton collider during its first phase of operation from the first physics run in 1981 to the last one at the end of 1985 The volume consists of a series of review articles written by physicists who are actively involved with the collider research program The first article describes the proton antiproton collider facility itself including the antiproton source and its principle of operation based on stochastic cooling The subsequent six articles deal with the various physics subjects studied at the collider Each article describes in detail the experimental results on a particular subject and also provides the theoretical framework necessary for their interpretation Finally the last two articles discuss the physics expectations from the improved collider the so called ACOL program which has just started operation and also from the next generation of supercolliders which are being considered both in Europe and in the United States America *Physics 1981-1990* Tore Frøngsmyr,Gösta Ekspöng,Nobelstiftelsen,1993 Physics of Particle Accelerators Margaret Dienes,1989
