Protostars & Planets Tom Gehrels,1978 **Protostars and Planets** Tom Gehrels,1978 *Protostars & Planets* Tom Gehrels,Mildred Shapley Matthews,1978 **Protostars and planets : studies of star formation and of the origin of the solar system** Tom Gehrels,Vincent Mannings,David C. Black,2000 **The Cosmic History of the Biogenic Elements and Compounds** John A. Wood,1985 Space Science Series. Protostars & Planets. Studies of Star Formation and of the Origin of the Solar System Tom Gehrels,1978 A History of Modern Planetary Physics Stephen G. Brush,1996-04-26 Where did we come from Before there was life there had to be something to live on a planet a solar system During the past 200 years astronomers and geologists have developed and tested several different theories about the origin of the solar system and the nature of the Earth Together the three volumes that make up A History of Modern Planetary Physics present a survey of these theories The early twentieth century saw the replacement of the Nebular Hypothesis with the Chamberlain Moulton theory that the solar system resulted from the encounter of the Sun with a passing star Fruitful Encounters follows the eventual refutation of the encounter theory and the subsequent revival of a modernised Nebular Hypothesis Professor Brush also discusses the role of findings from the Apollo space programme especially the analysis of lunar samples culminating in the establishment in the 1980s of the giant impact theory of the Moon s origin Comets and the Origin of Life Cyril Ponnamperuma,2012-12-06 The return of Halley s Comet in 1986 has generated much excitement in the scientific community with preparations already afoot for an International Comet Watch and a comet launch by the European Space Community the Japanese and Soviet Space Scientists The meeting held at the University of Maryland in October 1980 was primarily stimulated by the preparations for further study of this comet and by one of the most important unanswered questions related to comets namely whether they may have made a contribution to the origin of life on earth Our understanding of the role of comets in the origin of life must necessarily come from our studies of the astronomy and the chemistry of comets Some clues to the processes which led to the formation of organic molecules and eventually to the appearance of life have come from these studies of comets perhaps the most ancient of all objects in our solar system Whether there is however a biology of comets still remains to be seen although some claims have been made that perhaps comets might themselves provide an environment for even the beginnings of life Scientists with the latest available information on comets and differing opinions as to the role of comets in the origin of life attended this symposium The formal papers presented are now being made available to the students of chemical evolution within the pages of this volume

Laboratory Astrophysics and Space Research P. Ehrenfreund,C. Krafft,H. Kochan,Valerio Pirronello,2012-12-06 The book presents the most recent developments of laboratory studies in astrophysics and space research The individual chapters review laboratory investigations under simulated space conditions studies for the design of successful space experiments or for supporting the interpretation of astronomical and space mission recorded data Related theoretical models numerical

simulations and in situ observations demonstrate the necessity of experimental work on the Earth's surface. The expertise of the contributing scientists covers a broad spectrum and is included in general overviews from fundamental science to recent space technology. The book intends to serve as a reference for researchers and graduate students on the most recent activities and results in laboratory astrophysics and to give reviews of their applications in astronomy, planetology, cosmochemistry, space research and Solar System exploration.

The Evolution of the Biosphere M.I. Budyko, 2012-12-06

THE STUDY OF THE BIOSPHERE The term biosphere first appeared in the works of the French biologist J.B. Lamarck and the Austrian geologist E. Suess in the 19th century. In the 20th century the study of the biosphere attracted considerable attention largely due to the research of V.I. Vernadsky. The results of Vernadsky's investigations have appeared in a number of publications including the monograph *The Biosphere* published in 1926. This work consists of two parts: *The Biosphere in Cosmos* and *The Zone of Life*, written in a form of speculation and reflection that is rarely used in modern studies. This work concerns the distinguishing properties of the space occupied by organisms and the exceptional importance of the activities of these organisms in the formation of their environment. In this and subsequent studies Vernadsky has laid the foundations of the science of the biosphere which today plays an important role in the many branches of science concerned with the Earth. Several terms have been suggested for the science of the biosphere including global ecology, a discipline studying the global ecological system whose meaning is close to that of the biosphere. One of the most prominent predecessors of Vernadsky was his teacher V.V. Dokuchaev.

Literature 1983, Part 1 S. Böhme, Prof. Dr. Walter Fricke, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, Dr. Lutz D. Schmadel, G. Zech, 2013-11-11

Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of the literature concerning all aspects of astronomy, astrophysics and their border fields. It is devoted to the recording, summarizing and indexing of the relevant publications throughout the world. *Astronomy and Astrophysics Abstracts* is prepared by a special department of the Astronomisches Rechen Institut under the auspices of the International Astronomical Union. Volume 33 records literature published in 1983 and received before August 1, 1983. Some older documents which we received late and which are not surveyed in earlier volumes are included too. We acknowledge with thanks contributions of our colleagues all over the world. We also express our gratitude to all organizations, observatories and publishers which provide us with complimentary copies of their publications. Starting with Volume 33 all the recording, correction and data processing work was done by means of computers. The recording was done by our technical staff members Ms Helga Ballmann, Ms Mona El Choura, Ms Monika Kohl and Ms Sylvia Matyssek. Mr Martin Schlötelburg and Mr Ulrich Überall supported our task by careful proofreading. It is a pleasure to thank them all for their encouragement.

007 Obituaries **Proceedings of the Eighteenth General Assembly** Richard M. West, 2012-12-06 The XVIIIth General Assembly of the International Astronomical Union was held in Patras Greece from 17-26 August 1982. It was marked by the tragic death of the President of the IAU Professor M. K. V. Bappu on August 19, 1982. This sad event without precedent in the history of the Union posed serious problems to the organization of the General Assembly which could only be overcome by the full collaboration of all members, the organizers and the Executive Committee. A tribute to the memory of Prof. Bappu was paid during a plenary meeting on 23 August 1982. The full texts of the speeches are published in Chapter I of this volume. The excellent scientific programme in Patras was organized by the Presidents of the 40 IAU Commissions and coordinated by the IAU General Secretary 1979-1982 Professor P. A. Wayman. The local arrangements were taken care of by Professor C. Goudas and his collaborators from the Patras University. Due to the unexpected withdrawal in 1979 of another invitation to host the 1982 IAU General Assembly, the organizers in Greece had less than two years available for the extensive preparations and our hearty thanks are due to them for their persistent efforts which made this General Assembly an outstanding success.

Planets and Life Woodruff T. Sullivan, III, John Baross, 2007-09-13 Astrobiology involves the study of the origin and history of life on Earth, planets and moons where life may have arisen and the search for extraterrestrial life. It combines the sciences of biology, chemistry, palaeontology, geology, planetary physics and astronomy. This textbook brings together world experts in each of these disciplines to provide the most comprehensive coverage of the field currently available. Topics cover the origin and evolution of life on Earth, the geological, physical and chemical conditions in which life might arise and the detection of extraterrestrial life on other planets and moons. The book also covers the history of our ideas on extraterrestrial life and the origin of life as well as the ethical, philosophical and educational issues raised by astrobiology. Written to be accessible to students from diverse backgrounds, this text will be welcomed by advanced undergraduates and graduates who are taking astrobiology courses.

Advanced Mineralogy Arnold S. Marfunin, 1994 This reference book is the third in a series of five volumes presenting a concise treatise on problems and final results of modern studies of earth and planetary materials in their most sophisticated aspects. It is encyclopedic in its coverage of subjects which include the systematic description of all areas of mineral matter studies corresponding to the actual capabilities and needs of science and industry. This third volume with contributions from 200 top specialists from all over the world contains chapters on Mineral Matter in Space, Mineralogy of the Mantle and Core, Mineralogy of the Ocean Floor, Biomineralization, Environmental Mineralogy, Radiation Mineralogy and Gemology and Jewelry.

The Sun as a Star Roger John Tayler, 1997 As our nearest star, the Sun offers a unique opportunity to study stellar physics in action. Following the success of his previous books *Galaxies* and *The Stars*, Roger Tayler presents the first full picture of how studies of the Sun and the solar system help us understand stars in general and other planetary systems. Using mathematics appropriate for advanced undergraduate students in physics, this textbook provides a broad and wide-ranging introduction to the Sun as a star. Succinct derivations of key results such as the

properties of spectral lines the theory of stellar oscillations plasma physics magnetohydrodynamics and dynamo theory are provided in a number of handy appendices ensuring that the book is completely self contained Altogether this is an invaluable textbook for students studying the Sun stars the solar terrestrial environment and the formation of planetary systems International Aerospace Abstracts ,1998 Chondrules Sara S.
