Dimensional Spaces Sean Dineen,2012-12-06 Infinite dimensional holomorphy is the study of holomorphic or analytic functions over complex topological vector spaces The terms in this description are easily stated and explained and allow the subject to project itself initially and innocently as a compact theory with well defined boundaries However a comprehensive study would include delving into and interacting with not only the obvious topics of topology several complex variables theory and functional analysis but also differential geometry Jordan algebras Lie groups operator theory logic differential equations and fixed point theory This diversity leads to a dynamic synthesis of ideas and to an appreciation of a remarkable feature of mathematics its unity Unity requires synthesis while synthesis leads to unity It is necessary to stand back every so often to take an overall look at one's subject and ask How has it developed over the last ten twenty fifty years Where is it going What am I doing I was asking these questions during the spring of 1993 as I prepared a short course to be given at Universidade Federal do Rio de Janeiro during the following July The abundance of suitable material made the selection of topics difficult For some time I hesitated between two very different aspects of infinite dimensional holomorphy the geometric algebraic theory associated with bounded symmetric domains and Jordan triple systems and the topological theory which forms the subject of the present book *Complex Analysis in Banach Spaces* Jorge Mujica,2010-03-18 The development of complex analysis is based on issues related to holomorphic continuation and holomorphic approximation This volume presents a unified view of these topics in finite and infinite dimensions A high level tutorial in pure and applied mathematics its prerequisites include a familiarity with the basic properties of holomorphic functions the principles of Banach and Hilbert spaces and the theory of Lebesgue integration The four part treatment begins with an overview of the basic properties of holomorphic mappings and holomorphic domains in Banach spaces The second section explores differentiable mappings differentiable forms and polynomially convex compact sets in which the results are applied to the study of Banach and Frchet algebras Subsequent sections examine plurisubharmonic functions and pseudoconvex domains in Banach spaces along with Riemann domains and envelopes of holomorphy In addition to its value as a text for advanced graduate students of mathematics this volume also functions as a reference for researchers and professionals **Analytic Functions and**

Analysis and Computer Algebra R.P. Gilbert, Joji Kajiwara, Yongzhi S. Xu, 2013-12-01 This volume consists of papers presented in the special sessions on Complex and Numerical Analysis Value Distribution Theory and Complex Domains and Use of Symbolic Computation in Mathematics Education of the ISAAC 97 Congress held at the University of Delaware during June 2 7 1997 The ISAAC Congress coincided with a U S Japan Seminar also held at the University of Delaware The latter was supported by the National Science Foundation through Grant INT 9603029 and the Japan Society for the Promotion of Science through Grant MTCS 134 It was natural that the participants of both meetings should interact and consequently several persons attending the Congress also presented papers in the Seminar The success of the ISAAC Congress and the U S Japan Seminar has led to the ISAAC 99 Congress being held in Fukuoka Japan during August 1999 Many of the same participants will return to this Seminar Indeed it appears that the spirit of the U S Japan Seminar will be continued every second year as part of the ISAAC Congresses We decided to include with the papers presented in the ISAAC Congress and the U S Japan Seminar several very good papers by colleagues from the former Soviet Union These participants in the ISAAC Congress attended at their own expense
