Pseudodifferential Equations Over Non-Archimedean Spaces W. A. Zúñiga-Galindo,2017-01-08 Focusing on p adic and adelic analogues of pseudodifferential equations this monograph presents a very general theory of parabolic type equations and their Markov processes motivated by their connection with models of complex hierarchic systems The Gelfand Shilov method for constructing fundamental solutions using local zeta functions is developed in a p adic setting and several particular equations are studied such as the p adic analogues of the Klein Gordon equation Pseudodifferential equations for complex valued functions on non Archimedean local fields are central to contemporary harmonic analysis and mathematical physics and their theory reveals a deep connection with probability and number theory The results of this book extend and complement the material presented by Vladimirov Volovich and Zelenov 1994 and Kochubei 2001 which emphasize spectral theory and evolution equations in a single variable and Albeverio Khrennikov and Shelkovich 2010 which deals mainly with the theory and applications of p adic wavelets **Advances in Non-Archimedean Analysis and Applications** W. A. Zúñiga-Galindo,Bourama Toni,2021-12-02 This book provides a broad interdisciplinary overview of non Archimedean analysis and its applications Featuring new techniques developed by leading experts in the field it highlights the relevance and depth of this important area of mathematics in particular its expanding reach into the physical biological social and computational sciences as well as engineering and technology In the last forty years the connections between non Archimedean mathematics and disciplines such as physics biology economics and engineering have received considerable attention Ultrametric spaces appear naturally in models where hierarchy plays a central role a phenomenon known as ultrametricity In the 80s the idea of using ultrametric spaces to describe the states of complex systems with a natural hierarchical structure emerged in the works of Fraunfelder Parisi Stein and others A central paradigm in the physics of certain complex systems for instance proteins asserts that the dynamics of such a system can be modeled as a random walk on the energy landscape of the system To construct mathematical models the energy landscape is approximated by an ultrametric space a finite rooted tree and then the dynamics of the system is modeled as a random walk on the leaves of a finite tree In the same decade Volovich proposed using ultrametric spaces in physical models dealing with very short distances This conjecture has led to a large body of research in quantum field theory and string theory In economics the non Archimedean utility theory uses probability measures with values in ordered non Archimedean fields Ultrametric spaces are also vital in classification and clustering techniques Currently researchers are actively investigating the following areas p adic dynamical systems p adic

techniques in cryptography p adic reaction diffusion equations and biological models p adic models in geophysics stochastic processes in ultrametric spaces applications of ultrametric spaces in data processing and more This contributed volume gathers the latest theoretical developments as well as state of the art applications of non Archimedean analysis It covers non Archimedean and non commutative geometry renormalization p adic quantum field theory and p adic quantum mechanics as well as p adic string theory and p adic dynamics Further topics include ultrametric bioinformation cryptography and bioinformatics in p adic settings non Archimedean spacetime gravity and cosmology p adic methods in spin glasses and non Archimedean analysis of mental spaces By doing so it highlights new avenues of research in the mathematical sciences biosciences and computational sciences **P-adic Deterministic and Random Dynamics** Andrei Y.
