Random Functions and Hydrology Rafael L. Bras, Ignacio Rodríguez-Iturbe, 1993-01-01 Advanced level view of the tools of random processes and field theory as applied to the analysis and synthesis of hydrologic phenomena Topics include time series analysis optimal estimation optimal interpolation Kriging frequency domain analysis of signals and linear systems theory Techniques and examples chosen to illustrate the latest advances in hydrologic signal analysis Useable as graduate level text in water resource systems stochastic hydrology random processes and signal analysis 202 illustrations **Water**

Resources Yield T. A. McMahon, Adebayo J. Adeloye, 2005 This book will benefit graduate students university professors and consultants working in the area of surface water resources yield planning and assessment It is very easy to understand and includes well presented worked examples which will facilitate the understanding of some of the complex storage yield performance techniques described in the book This book is one of the most complete reference textbooks on water resources yield assessment and is a must for all those engaged in this subject Theory, Modeling, and Field Investigation in

Winter, 2000-01-01 The refereed and edited proceedings of the symposium Schlomo P Neuman Recent Advances After 30 Years of Exceptional Contributions to Well Hydraulics Numerical Modeling and Field Investigations which was held in Tucson Arizona in October 1998 Among the topics are four decades of inverse problems in hydrogeology a connected network paradigm for the alluvial aquifer system the influence of multi scale structure in non ergodic solute transport in heterogeneous porous media the Gaussian analysis of one dimensional unsaturated flow in randomly heterogeneous soils and the type curve interpretation of transient single hole pneumatic injection tests in unsaturated fractured tuffs at the Apache Leap Research Site Annotation copyrighted by Book News Inc Portland OR

Flood Forecasting Using Artificial Neural Networks P Varoonchotikul, 2003-01-01 Flood disasters continue to occur in many countries in the world and cause tremendous casualties and property damage To mitigate the effects of floods a range of structural and non structural measures have been employed including dykes channelling flood proofing property land use regulation and flood warning schemes Such schemes can include the use of Artificial Neural Networks ANN for modelling the rainfall run off process as it is a quick and flexible approach which gives very promising results However the inability of ANN to extrapolate beyond the limits of the training range is a serious limitation of the method and this book examines ways of side stepping or solving this complex issue Overexploitation and Contamination of Shared Groundwater

Resources Christophe J.G. Darnault, 2008-02-02 Forty percent of the world's population depends upon increasingly scarce and shared water resources This situation is critical at both international and national levels not only for socio economic development but also for the regional stability The intensive use of groundwater for irrigation and water supply is adding pressures to scarce water resources and the environment through overexploitation and contamination which result in situations that may lead to conflicts The book from the NATO ASI on Overexploitation and Contamination of Shared

Groundwater Resources Management Bio technological and Political Approaches to Avoid Conflicts is written by authors from different disciplines and regions of the world The aim of the book is to contribute to the knowledge of shared groundwater resources management to avoid conflicts by considering multi disciplinary approaches based on effective and equitable water sharing for all water users through cooperation and within a compassionate ecological framework along with the need for sustainable resources development and the quest for environmental and human security The scope of the book covers the hydrogeological environmental bio technological and management aspects of shared groundwater resources integrating social economic and political dimensions as well as legal and educational perspectives

Hydrological Models for Environmental Management Mikhail V. Bolgov, Lars Gottschalk, Irina Krasovskaia, Robert J. Moore, 2012-12-06 This book contains a selection of papers from a NATO Advanced Research Workshop entitled Stochastic models of hydrological processes and their applications to problems of environmental preservation convened in Moscow over the period 23-27 November 1998 The Workshop was unique in providing the first opportunity for over a decade for countries of the Russian Federation to interact with other countries across the world to discuss hydrological science issues relevant to environmental management The contrasting schools of thought within the Russian Federation and with other countries proved a fascinating and valuable experience for those fortunate enough to attend The scientific content of the Workshop was motivated by a number of concerns Water is a key natural resource whose modelling and management is made complex by its inherent spatial unevenness and time variability Traditional methods for investigating hydrological processes in nature employ stochastic modelling and forecasting However these are not well developed with regard to i representing the characteristics of hydrological regimes and ii investigating the influence of water factors on processes which arise in biological systems and those involving hydrochemical geophysical and other processes

Mathematics of Planet Earth Hans G. Kaper, Fred S. Roberts, 2019-11-01 Since its inception in 2013 Mathematics of Planet Earth MPE focuses on mathematical issues arising in the study of our planet Interested in the impact of human activities on the Earth's system this multidisciplinary field considers the planet not only as a physical system but also as a system supporting life a system organized by humans and a system at risk The articles collected in this volume demonstrate the breadth of techniques and tools from mathematics statistics and operations research used in MPE Topics include climate modeling the spread of infectious diseases stability of ecosystems ecosystem services biodiversity infrastructure restoration after an extreme event urban environments food security and food safety Demonstrating the mathematical sciences in action this book presents real world challenges for the mathematical sciences highlighting applications to issues of current concern to society Arranged into three topical sections Geo and Physical Sciences Life Sciences Ecology and Evolution Socio economics and Infrastructure thirteen chapters address questions such as how to measure biodiversity what mathematics can say about the sixth mass extinction how to optimize the long term human use of natural capital and the impact of data on infrastructure management The book also treats the subject

of infectious diseases with new examples and presents an introduction to the mathematics of food systems and food security Each chapter functions as an introduction that can be studied independently offering source material for graduate student seminars and self study The range of featured research topics provides mathematical scientists with starting points for the study of our planet and the impact of human activities At the same time it offers application scientists a plethora of modern mathematical tools and techniques to address the various topics in practice Including hundreds of references to the vast literature associated with each topic this book serves as an inspiration for further research Hydroinformatics Praveen Kumar, Mike Folk, Momcilo Markus, Jay C. Alameda, 2005-11-02 Modern hydrology is more interdisciplinary than ever Staggering amounts and varieties of information pour in from GIS and remote sensing systems every day and this information must be collected interpreted and shared efficiently Hydroinformatics Data Integrative Approaches in Computation Analysis and Modeling introduces the tools approach **Pier and Contraction Scour in Cohesive Soils** J.-L. Briaud, National Cooperative Highway Research Program, 2004 Research sponsored by the American Association of State Highway and Transportation Officials in cooperation with the Federal Highway Administration *Flow and Transport in Porous Formations* Gedeon Dagan, 2012-12-06 In the mid seventies a new area of research has emerged in subsurface hydrology namely stochastic modeling of flow and transport This development has been motivated by the recognition of the ubiquitous presence of heterogeneities in natural formations and of their effect upon transport and flow on the one hand and by the vast expansion of computational capability provided by electronic machines on the other Apart from this one of the areas in which spatial variability of formation properties plays a cardinal role is of contaminant transport a subject of growing interest and concern I have been quite fortunate to be engaged in research in this area from its inception and to witness the rapid growth of the community and of the literature on spatial variability and its impact upon subsurface hydrology In view of this increasing interest I decided a few years ago that it would be useful to present the subject in a systematic and comprehensive manner in order to help those who wish to engage themselves in research or application of this new field I viewed as my primary task to analyze the large scale heterogeneity of aquifers and its effect presuming that the reader already possesses a background in traditional hydrology This is achieved in Parts 3 4 and 5 of the text which incorporate the pertinent material
