Resources Christophe J.G. Darnault, 2008-02-02 Forty percent of the world's population depends upon increasingly scarce and shared water resources This situation is critical at both international and national levels not only for socio economic development but also for the regional stability The intensive use of groundwater for irrigation and water supply is adding pressures to scarce water resources and the environment through overexploitation and contamination which result in situations that may lead to conflicts The book from the NATO ASI on Overexploitation and Contamination of Shared Groundwater Resources Management Bio technological and Political Approaches to Avoid Conflicts is written by authors

from different disciplines and regions of the world The aim of the book is to contribute to the knowledge of shared groundwater resources management to avoid conflicts by considering multi disciplinary approaches based on effective and equitable water sharing for all water users through cooperation and within a compassionate ecological framework along with the need for sustainable resources development and the quest for environmental and human security The scope of the book covers the hydrogeological environmental bio technological and management aspects of shared groundwater resources integrating social economic and political dimensions as well as legal and educational perspectives Flowpath 2019 - National meeting on hydrogeology Conference Flowpath,2019-06-07 FLOWPATH 2019 the 4th National Meeting on Hydrogeology was held in Milan from 12th to 14th June 2019 According to the aim of the previous Editions of FLOWPATH held in Bologna 2012 Viterbo 2014 and Cagliari 2017 the conference is an opportunity for Italian hydrogeologists to exchange ideas and knowledge on different groundwater issues The objectives of the conference are To promote dialogue and exchange of scientific knowledge among young hydrogeologists To deepen the theoretical and practical aspects of our understanding on groundwater To update all the stakeholders researchers and professionals on recent challenges in the hydrogeological sciences To encourage researchers professionals and administrators to contribute to the improvement of water resources management This Volume of Conference Proceedings contains the abstracts of oral and poster contributions accepted to FLOWPATH 2019 The abstract were evaluated by the Scientific and Organizing Committees This volume contains 99 abstracts submitted by Authors coming from Universities Public Authorities and Private Companies of Italy and many other countries such as Australia Belgium Croatia Czech Republic Greece Hungary Israel Malta Morocco Nigeria Spain Switzerland The Netherlands U K and U S A The conference focuses on four themes of great importance 1 Groundwater Resource Management 2 Fractured Rocks and Karst Aquifers 3 Contaminated Sites 4 Urban Hydrogeology The content of the Conference Proceedings is organized according to the four topics of the conference The keynote lectures open the sessions were they were presented followed by the scientific contributions in alphabetical order by first author s family name

Artificial Neural Networks in Hydrology R.S. Govindaraju,A.R. Rao,2013-03-09 R S GOVINDARAJU and ARAMACHANDRA RAO School of Civil Engineering Purdue University West Lafayette IN USA Background and Motivation The basic notion of artificial neural networks ANNs as we understand them today was perhaps first formalized by McCulloch and Pitts 1943 in their model of an artificial neuron Research in this field remained somewhat dormant in the early years perhaps because of the limited capabilities of this method and because there was no clear indication of its potential uses However interest in this area picked up momentum in a dramatic fashion with the works of Hopfield 1982 and Rumelhart et al 1986 Not only did these studies place artificial neural networks on a firmer mathematical footing but also opened the dOO of to a host of potential applications for this computational tool Consequently neural network computing has progressed rapidly along all fronts theoretical development of different learning algorithms computing capabilities and applications to diverse areas from neurophysiology to the stock market Initial studies on artificial neural networks were prompted by adesire to have computers mimic human learning As a result the jargon associated with the technical literature on this subject is replete with expressions such as excitation and inhibition of neurons strength of synaptic connections learning rates training and network experience ANNs have also been referred to as neurocomputers by people who want to preserve this analogy

Analysis of Water Resource Systems L. Votruba,1988-09-01 Water resource systems research provides a basis for rational water management in large basins The design and operation of water resource systems are both the most complicated and the most important tasks of water management This book deals with the basic issues involved in the application of systems sciences to water management A survey of the systems sciences the general systems theory cybernetics systems engineering operations research and systems analysis is presented as well as the methods for water resource systems analysis and for water resource systems analysis and for their evaluation The mathematical methods used in systems theory have been given detailed treatment Linear and dynamic programming have been used as models of optimal programming Since many practical tasks require the simulation models of water resource systems apart from their principles and a detailed description

the simulation language for computing programming has been included Other methods of operations research and their application to water resource systems have been analysed and evaluated Some of these are models of inventory theory models of queuing theory graphs network analysis and some special methods like the out of kilter algorithm the chance constrained model and the chance constrained model combined with the simulation model One chapter is devoted to information and information systems in water management The final part of the book deals with prospects for water resource systems development The book is intended for engineers and decision makers involved in projects operation and research However it can be used by students in high schools technical universities and by graduate students It will serve as an up to date source of information about the principles and methodology of water resource analysis and design
