Asymptotic Geometric Analysis, Part II Shiri Artstein-Avidan, Apostolos Giannopoulos, Vitali D. Milman, 2021-12-13 This book is a continuation of Asymptotic Geometric Analysis Part I which was published as volume 202 in this series Asymptotic geometric analysis studies properties of geometric objects such as normed spaces convex bodies or convex functions when the dimensions of these objects increase to infinity The asymptotic approach reveals many very novel phenomena which influence other fields in mathematics especially where a large data set is of main concern or a number of parameters which becomes uncontrollably large One of the important features of this new theory is in developing tools which allow studying high parametric families Among the topics covered in the book are measure concentration isoperimetric constants of log concave measures thin shell estimates stochastic localization the geometry of Gaussian measures volume inequalities for convex bodies local theory of Banach spaces type and cotype the Banach Mazur compactum symmetrizations restricted invertibility and functional versions of geometric notions and inequalities

Artificial Intelligence and Soft Computing, Part II Leszek Rutkowski, Rafał Scherer, Ryszard Tadeusiewicz, Lotfi A. Zadeh, Jacek M. Zurada, 2010-06-18 This volume constitutes the proceedings of the 10th International Conference on Artificial Intelligence and Soft Computing ICAISC 2010 held in Zakopane Poland in June 13 17 2010 The articles are organized in topical sections on Fuzzy Systems and Their Applications Data Mining Classification and Forecasting Image and Speech Analysis Bioinformatics and Medical Applications Volume 6113 together with Neural Networks and Their Applications Evolutionary Algorithms and Their Applications Agent System

Robotics and Control Various Problems of Artificial Intelligence Volume 6114 **Advances in Physical Ergonomics and Human Factors: Part II** Tareq Ahram, Renliu Jang, 2018-07-19 The discipline of human factors and ergonomics HF E is concerned with the design of products process services and work systems to assure their productive safe and satisfying use by people Physical ergonomics involves the design of working environments to fit human physical abilities By understanding the constraints and capabilities of the human body and mind we can design products services and environments that are effective reliable safe and comfortable for everyday use This book focuses on the advances in the physical HF E which are a critical aspect in the design of any human centered technological system The ideas and practical solutions described in the book are the outcome of dedicated research by academics and practitioners aiming to advance theory and practice in this dynamic and all encompassing discipline A thorough understanding of the physical characteristics of a wide range of people is essential in the development of consumer products and systems Human performance data serve as valuable information to designers and help ensure that the final products will fit the targeted population of end users Mastering physical ergonomics and safety engineering concepts is fundamental to the creation of products and systems that people are able to use avoidance of stresses and minimization of the risk for accidents Natural Time Analysis: The New View of Time, Part II Panayiotis Varotsos, Nicholas Sarlis, Efthimios Skordas, 2023-06-17 This monograph contains the advances achieved based on the content of our previous monograph published in 2011 In other words the present monograph can be considered as Part II containing new results accomplished in the last decade These were published in several reputed international journals based on the concept of natural time discussed in detail in our earlier monograph The analysis in natural time enables the study of the dynamical evolution of a complex system and identifies when the system enters a critical stage A wide range of applications are discussed such as the cases of environmental extreme events disasters and sudden cardiac death More light is shed on changes of natural time features before major earthquakes like the 2011 M9 Tohoku earthquake in Japan and the 2017 M8.2 Chiapas earthquake in Mexico Hence natural time analysis plays a key role in predicting impending catastrophic events in general with a primary audience Researchers and Academics in Physics Earth Sciences and Medicine From Stochastic Calculus to Mathematical Finance Yu. Kabanov, R. Liptser, J. Stoyanov, 2007-04-03 Dedicated to the Russian mathematician Albert Shiryaev on his 70th birthday this is a collection of papers written by his former students co authors and colleagues The book represents the modern state of art of a quickly maturing theory and will be an essential source and reading for researchers in this area Diversity of topics and comprehensive style of the papers make the book attractive for PhD students and young researchers **Stochastic Structural Dynamics 2** I. Elishakoff, Y.K. Lin, 2012-12-06 This volume contains eighteen selected papers presented at the Second International Conference on Stochastic Structural Dynamics which are related to new practical applications in the field This and a companion volume related to new theoretical developments constitute the proceedings of the conference and reflect the state of the art of the rapidly developing subject The conference

was held in Boca Raton Florida during May 9 11 1990 hosted by the Center for Applied Stochastic Research of Florida Atlantic University A total of 20 technical sessions were organized and attended by eighty participants from 12 countries Special emphases of the conference were placed on two areas applications to earthquake engineering and stochastic stability of nonlinear systems Two sessions were dedicated to the memory of late Professor Frank Kozin one of the founders and most active contributors to the stochastic stability theory We are indebted to the National Center for Earthquake Engineering Research NCEER for financial support Most credit belongs to each of the authors whose contributions were the very basis for the undoubted success of the conference We are grateful to the reviewers who carefully refereed the contributions for these two volumes Our special thanks are due to Mrs Christine Mikulski who carried out all the necessary secretarial tasks associated with the conference with dedication

Cyclostationarity: Theory and Methods Fakher Chaari, Jacek Leśkow, Antonio Napolitano, Andrea Sanchez-Ramirez, 2014-01-16 In the last decade the research in signal analysis was dominated by models that encompass nonstationarity as an important feature This book presents the results of a workshop held in Grodek Poland in February 2013 which was dedicated to the investigation of cyclostationary signals Its main objective is to highlight the strong interactions between theory and applications of cyclostationary signals with the use of modern statistical tools An important application of cyclostationary signals is the analysis of mechanical signals generated by a vibrating mechanism Cyclostationary models are very important to perform basic operations on signals in both time and frequency domains One of the fundamental problems in diagnosis of rotating machine is the identification of significant modulating frequencies that contribute to the cyclostationary nature of the signals The book shows that there are modern tools available for analyzing cyclostationary signals without the assumption of gaussianity Those methods are based on the ideas of bootstrap subsampling and Fraction of time FOT models The book is organised in two parts The first part will be dedicated to pure theory on cyclostationarity Applications are presented in the second part including several mechanical systems such as bearings gears with or without damages
