**Rapidly Progressive Glomerulonephritis** C. D. Pusey, A. J. Rees, 1998 Rapidly Progressive Glomerulonephritis is one of the most exciting areas in renal medicine The disease usually presents acutely and leads to end stage renal failure in weeks or months if untreated However appropriate immunosuppressive therapy can dramatically improve the prognosis in many cases such that renal failure is avoided It is now clear that various immunopathological processes are involved and that an accurate diagnosis is of value in guiding management This volume aims to bring together current knowledge of both scientific and clinical aspects of RPN Recent advances in the immunology inflammatory mechanisms and pathology of RPGN are discussed This is followed by consideration of the major causes of RPGN which include Goodpasture's disease primary systemic vasculitis and systemic lupus erythematosus RPGN secondary to other renal and systemic diseases and RPGN in children are also described Finally new approaches to treatment are reviewed Although certain of these areas are covered in the larger textbooks of renal medicine our aim is to provide a current overview of RPGN in a concise volume This should be of particular interest to nephrologists and general physicians including those in training but may also be of value to pathologists immunologists and other studying the mechanisms of renal disease We hope that this volume will help them in the management of patients with RPGN or in planning their research into this condition      **Replacement of Renal**
