Rasch Models Foundations Recent Developments And Applications:

Rasch Models Gerhard H. Fischer, Ivo W. Molenaar, 1995-04-13 Thirty two years after the publication of the legendary Rasch book Rasch 1960 the rich literature on the Rasch model and its extensions was scattered in journals and many less accessible sources including grey literature When asked by students or junior researchers for references to the Rasch model it was a typical reaction on the part of the editors to state that it was difficult to name one or just a few actually only a whole list of references differing in notation and level of formal abstraction seemed to meet the request in most cases Therefore in 1992 the editors decided to invite a number of outstanding authors in the field of Rasch modeling to contribute to a book presenting the current state of knowledge about Rasch models The aim was not just to collect a number of papers on the subject rather to produce a well organized monograph To this end a workshop was held in Vienna from 25 to 27 February 1993 in which after a process of mutual reviewing drafts of all chapters were read and discussed by all authors leading to a more systematic organization of the topics treated in unified notation and terminology The workshop was sponsored by the University of Vienna here the editors would like to express their thanks in the name of all contributors both for the financial support and for the hospitality granted

C.R. Rao, Sandip Sinharay, 2007 This volume representing a compilation of authoritative reviews on a multitude of uses of statistics in epidemiology and medical statistics written by internationally renowned experts is addressed to statisticians working in biomedical and epidemiological fields who use statistical and quantitative methods in their work While the use of statistics in these fields has a long and rich history explosive growth of science in general and clinical and epidemiological sciences in particular have gone through a sea of change spawning the development of new methods and innovative adaptations of standard methods Since the literature is highly scattered the Editors have undertaken this humble exercise to document a representative collection of topics of broad interest to diverse users The volume spans a cross section of standard topics oriented toward users in the current evolving field as well as special topics in much need which have more recent origins This volume was prepared especially keeping the applied statisticians in mind emphasizing applications oriented methods and techniques including references to appropriate software when relevant The contributors are internationally renowned experts in their respective areas This volume addresses emerging statistical challenges in epidemiological biomedical and pharmaceutical research It features methods for assessing Biomarkers analysis of competing risks clinical trials including sequential and group sequential crossover designs cluster randomized and adaptive designs and structural equations modelling and longitudinal data analysis

Mathematical Methods in Survival Analysis, Reliability and Quality of Life Catherine Huber, Nikolaos Limnios, Mounir Mesbah, Mikhail S. Nikulin, 2013-03-01 Reliability and survival analysis are important applications of stochastic mathematics probability statistics and stochastic processes that are usually covered separately in spite of the similarity of the involved mathematical theory This title aims to redress this situation it

includes 21 chapters divided into four parts Survival analysis Reliability Quality of life and Related topics Many of these chapters were presented at the European Seminar on Mathematical Methods for Survival Analysis Reliability and Quality of Life in 2006 **Handbook of Modern Item Response Theory** Wim J. van der Linden, Ronald K. Hambleton, 2013-03-09

Item response theory has become an essential component in the toolkit of every researcher in the behavioral sciences It provides a powerful means to study individual responses to a variety of stimuli and the methodology has been extended and developed to cover many different models of interaction This volume presents a wide ranging handbook to item response theory and its applications to educational and psychological testing It will serve as both an introduction to the subject and also as a comprehensive reference volume for practitioners and researchers It is organized into six major sections the nominal categories model models for response time or multiple attempts on items models for multiple abilities or cognitive components nonparametric models models for nonmonotone items and models with special assumptions Each chapter in the book has been written by an expert of that particular topic and the chapters have been carefully edited to ensure that a uniform style of notation and presentation is used throughout As a result all researchers whose work uses item response theory will find this an indispensable companion to their work and it will be the subject's reference volume for many years to come **Statistical Methods for Quality of Life Studies** Mounir Mesbah, Bernard F. Cole, Mei-Ling Ting Lee, 2013-06-29

On October 16 and 17 2000 we hosted an international workshop entitled Statistical Design Measurement and Analysis of Health Related Quality of Life The workshop was held in the beautiful city of Arradon South Brittany France with the main goal of fostering an interdisciplinary forum for discussion of theoretical and applied statistical issues arising in studies of health related quality of life HRQoL Included were biostatisticians psychometricians and public health professionals e g physicians sociologists psychologists active in the study of HRQoL In assembling this volume we invited each conference participant to contribute a paper based on his or her presentation and the ensuing and very interesting discussions that took place in Arradon All papers were peer reviewed by anonymous reviewers and revised before final editing and acceptance Although this process was quite time consuming we believe that it greatly improved the volume as a whole making this book a valuable contribution to the field of HRQoL research The volume presents a broad spectrum of papers presented at the Workshop and thus illustrates the range of current research related to the theory methods and applications of HRQoL as well as the interdisciplinary nature of this work Following an introduction written by Sir David Cox it includes 27 articles organized into the following chapters Beyond Assessment of Quality of Life in Schizophrenia A. George Awad, Lakshmi

N.P. Voruganti, 2016-06-14 This book fills a significant research gap in how to integrate quality of life data into relevant clinical care plans and to broaden its applicability to pharmacoeconomic studies of antipsychotic medications and health policy decision making It also presents an argument for reformulating the concept of health related quality of life in schizophrenia as a bio psycho social construct which provides an opportunity to better explore the many factors

underpinning the concept itself Internationally renowned experts from different scientific backgrounds and scopes of expertise each make arguments for the need to invigorate quality of life as a concept in schizophrenia by broadening its usefulness for clinical and research efforts The book represents an important addition to the extensive contributions of its editors Dr A George Awad and Dr Lakshmi N P Voruganti to the field of quality of life Item response theory in clinical outcome measurement Rebecca Holman,2005

A Short Guide to Item Response Theory Models Gerhard Tutz,2025-08-02 This book presents foundational concepts essential principles and practical applications of Item Response Theory IRT It provides a structured survey of diverse models that have been put forth emphasizing both their differences and commonalities The main focus is on modern latent trait theory models which provide measurement tools that clearly separate between person abilities and item parameters The topics covered include the binary Rasch model its extensions and alternative binary models ordinal models and their extensions that account for response styles the thresholds model classical test theory response models for count data differential item functioning and explanatory item response models Tree based item response models typically not found in classical IRT textbooks are also addressed Applications of the models are illustrated on several data sets from differing areas showing how models can be fitted and compared All examples have been computed using R Code snippets are provided and the full R code for most of the examples is available online The book is aimed at graduate students applied statisticians and researchers working in psychometrics educators and anyone curious about modeling strategies that enhance the precision and validity of their measurement tools It serves as an introductory guide for beginners while also providing a resource for those seeking an overview of the plethora of available IRT models
