2018 On 17 October 1989 one the largest earthquakes to occur in California since the San Francisco earthquake of April
1906 struck Northern California Damage was extensive none more so than the partial collapse of the San Francisco Oakland
Bay Bridge s eastern span a vital link used by hundreds of thousands of Californians every day The bridge was closed for a
month for repairs and then reopened to traffic But what ensued over the next 25 years is the extraordinary story that Karen
Trapenberg Frick tells here It is a cautionary tale to which any governing authority embarking on a megaproject should pay
heed She describes the process by which the bridge was eventually replaced as an exercise in shadowboxing which pitted the
combined talents and shortcomings partnerships and jealousies ingenuity and obtuseness generosity and parsimony of the
State s and the region s leading elected officials engineers architects and other members of the governing elites against a
collectively imagined future catastrophe of unknown proportions In so doing she highlights three key questions If safety was
the reason to replace the bridge why did it take almost 25 years to do so How did an original estimate of 250 million in 1995
soar to 6.5 billion by 2014 And why was such a complex design chosen Her final chapter part epilogue part reflection
provides recommendations to improve megaproject delivery and design **History of Navigation & Navigation**
