Teaching and Learning Mathematics in Multilingual Classrooms Anjum Halai, Philip Clarkson, 2015-12-17 Contemporary concerns in mathematics education recognize that in the increasingly technological and globalized world with concomitant change in population demographics e g immigration urbanization and a change in the status of languages e g English as a dominant language of science and technology multilingualism in classrooms is a norm rather than an exception Shifts in perspective also view language not simply as an instrument for cognition with all learners equipped with this instrument in service of learning although clearly in the classroom that remains of importance Rather it is now also being acknowledged that language use is inherently political so that the language that gets official recognition in the classroom is invariably the language of the powerful elite or the dominant societal language or in the case of post colonial contexts the language of the colonisers From this socio political role of language in learning quite different issues arise for teaching learning and curriculum for linguistically marginalized learners than that of cognition e g immigrants second language learners other Policies on language in education are being considered and re considered with specific reference to mathematics teaching

and learning Given the policy environment globally the proposed publication is timely This edited collection draws on recent emerging insights and understandings about the approaches to improving policy and practice in mathematics education and mathematics teacher education in multilingual settings It presents and discusses critically examples of work from a range of contexts and uses these examples to draw out key issues for research in education in language diverse settings including teaching learning curriculum and fit these with appropriate policy and equity approaches With contributions from all over the world especially novice researchers in low income countries this book is a valuable resource for courses in Mathematics Education and related social sciences both at the graduate and undergraduate levels as well as for students of international development
