Dr. Kazuya Kodama did a fabulous job as our Web master.

Teaching and Planning for the NNS with Heinemann Mathematics Pearson Education, 2000

Human Information Processing Barry H. Kantowitz, 2021-10-14. Originally published in 1974, this volume presents seven detailed views of human information processing at the time. While no single volume can do justice to the breadth of the area, it was hoped that the present selections reflected both the content and methodological approaches currently used by experimental psychologists concerned with the issues and problems of human information processing. The organization of the book is simple, proceeding from the human performance end of the continuum to an overview of which is given in the first chapter. Successive chapters are progressively more concerned with human cognition, and the last chapter gives an overview of human cognition. The intervening chapters are devoted to more specific topics and yield a detailed portrait of the models, findings, and methodology of human information processing.

Making a Machine That Sees Like Us Zygmunt Pizlo, Yunfeng Li, Tadamasa Sawada, Robert M. Steinman, 2014-04-09. Making a Machine That Sees Like Us explains why and how our visual perceptions can provide us with an accurate representation of the external world. Along the way, it tells the story of a machine, a computational model built by the authors that solves the computationally difficult problem of seeing the way humans do. This accomplishment required a radical paradigm shift, one that challenged preconceptions about visual perception and tested the limits of human behavior modeling for practical application. The text balances scientific sophistication and compelling storytelling, making it accessible to both technical and general readers. Online demonstrations and references to the authors' previously published papers detail how the machine was developed and what drove the ideas needed to make it work. The authors contextualize their new theory of shape perception by highlighting criticisms and opposing theories, offering readers a fascinating account not only of their revolutionary results but of the scientific process that guided the way.

Pattern and Shape Kurt F. Rowland, 1964. This book hopes to encourage people to examine the shapes and patterns which form the background of human life.
