[The Friendship of a Mountain](#) Pascal Bruckner, 2023-05-25 Why are we fascinated by mountains These outcrops of rock were once considered unsightly something to be avoided at all costs but since Rousseau they have been contrasted with our corrupt cities and viewed as serene enclaves of beauty and relaxation But why climb to the summit only to come back down again Why does the toil of climbing convert into joy What metaphysics of the absolute is playing out here what challenge does climbing pose to time and ageing to fearful panic to the brush with danger which leads to conquest It's not faith that elevates mountains it's mountains that elevate our faith in challenging us to overcome them These hooded majesties crush some people while exalting others For the latter climbing means being born again reaching a state of exhilaration Being seized by exhaustion upon arriving at the summit is akin to casting your eyes upon paradise Is it the stinging cold the wind so strong that it almost knocks you down or is it higher powers that speak to us in this mixture of terror and beauty A child of the mountains who spent his youth in Austria and Switzerland Pascal Bruckner has special ties to the subject of this book the further he climbs the more he reconnects to his past In sparkling and sensual prose Bruckner's paean to the majesty of mountains weaves together things seen and things read childhood memories literature and philosophy interlaced with reflections on life ageing and the unrivalled beauty of an ecosystem that we are in danger of destroying

[Cattle, Their Predators and Geomatics Research](#) Michael O'Neal Campbell, 2025-08-06 Cattle are currently the most important domesticated mammals with populations numbering in the hundreds of millions and occupying large tracts of land while the conservation of large mammalian carnivores is becoming a dominant discourse in modern geopolitics also claiming large portions of the Earth's land surface Computer based surveying and communication systems including geomatics Big Data and Big Tech are becoming an essential part of human communication and environmental

assessments and are critical to large scale assessments of land conflicts A current critical potent but neglected issue concerns the measurement of the interfaces of large carnivore and cattle ecologies in a cross continental format This book offers a novel approach to the interfaces of the sciences of conservation biology animal ecology agricultural development and geomatics which are increasingly interconnected in modern global development scenarios For animal ecology and conservation biology it is about the management systems that have developed from ecological and human parameters For agricultural development topics concern ancestral development physiological characteristics ecological requirements and predation opportunities and conflicts of cattle breeds For geomatics the topics concern the image based and survey based technologies that enable more critical environmental assessments The book takes a novel approach by examining the ancestry of cattle including the aurochs and current wild buffalos gaur banteng yaks bison the process of domestication into taurine and indicine cattle the semi domestication of yaks and water buffalo the ecologies of ancestral and modern large carnivores including bears big cats and canids and how the requirements of these large charismatic mammals conflict with the requirements of cattle and agricultural development in Asia Europe Africa North America and South America This integrative approach contributes to the interests of academic researchers students practitioners and policy makers and general readers
