Accidents and Disasters Satish Chandra, 2023-05-18. This book deals with the contemporary subject of perception of risk and its influence on accidents and disasters. The contents examine the conventional viewpoints on human errors, incubation of errors, complexity and organisational deviance as a cause for accidents. Work of Mary Douglas with regard to risk, Charles Perrow's work on the normal accident theory and Diane Vaughan's theory on normalisation of deviance are examined from a fresh perspective in this book. It also discusses prominent accidents in aviation, space, nuclear energy, automotive and healthcare using the pandemic and Boeing 737 Max as a backdrop to study accidents and disasters. It further explores the background and similarities to these events and addresses the core issues such as the state of regulation, the worldview of the sociologists and proposes that mental models of complex systems, avarice and risk for gain as other possibilities for accidents. Using the concept of nudge in behavioural economics and the Elinor Ostrom's viewpoint on regulating for common good, it suggests a way forward through the High Reliability Organisation Theory (HRO) leading to enhanced risk perception. The book will be of interest to those who would like to understand the need to incorporate risk perception into regulation, engineers and scientists, professionals and policy makers working in the areas of disaster and risk management, technology areas like aviation, nuclear plants, space and healthcare, students of the sociology of risk and of course the general reader.

Foothold in the Heavens Ben Evans, 2010-08-14. Foothold in the Heavens, the second volume in the A History of Human Space Exploration series, focuses upon the 1970s, the decade in which humanity established real long-term foothold in the heavens with the construction and operation of the first space stations. It marked a transitional phase between the heady race to the Moon days of the Sixties and efforts to make space travel more economical, more frequent and more routine. Space exploration in the Seventies, although dominated by Soviet achievement, saw the first efforts of mankind to really live and work in space, producing results of direct benefit to humans on Earth. The emphasis changed from the 'gung ho' strap it on and go pioneers of the Sixties to the

more practical exploitation of space for science medicine and technology This book focuses on each mission launched between April 1971 and April 1981 from the launch of the world's first space station to the end of operations of Salyut 6 and from the expanded lengthy exploration of the Moon on Apollo 15 to the first flight of the Shuttle

Limiting Outer Space Alexander C.T. Geppert, 2018-04-18 Limiting Outer

Space propels the historicization of outer space by focusing on the Post Apollo period After the moon landings disillusionment set in Outer space no longer considered the inevitable destination of human expansion lost much of its popular appeal cultural significance and political urgency With the rapid waning of the worldwide Apollo frenzy the optimism of the Space Age gave way to an era of space fatigue and planetized limits Bringing together the history of European astroculture and American Soviet spaceflight with scholarship on the 1970s this cutting edge volume examines the reconfiguration of space imaginaries from a multiplicity of disciplinary perspectives Rather than invoking oft repeated narratives of Cold War rivalry and an escalating Space Race Limiting Outer Space breaks new ground by exploring a hitherto underrated and understudied decade the Post Apollo period

Boom Byrne Hobart, Tobias Huber, 2024-11-19 A timely investigation of the causes of technological and scientific stagnation and a radical blueprint for accelerating innovation Read this book for the alternative history of our age Peter Thiel investor and author of *Zero to One* A must read for those who seek to build the future Marc Andreessen cofounder of Netscape and Andreessen Horowitz From the Moon landing to the dawning of the atomic age the decades prior to the 1970s were characterized by the routine invention of transformative technologies at breakneck speed By comparison ours is an age of stagnation Median wage growth has slowed inequality and income concentration are on the rise and scientific research has become increasingly expensive and incremental Why are we unable to replicate the rate of progress of past decades What can we do to reinvigorate innovation In *Boom* Byrne Hobart and Tobias Huber take an inductive approach to the problem In a series of case studies tracking some of the most significant breakthroughs of the past 100 years from the Manhattan Project and the Apollo program to fracking and Bitcoin they reverse engineer how transformative progress arises from small groups with a unified vision vast funding and surprisingly poor accountability They conclude that financial bubbles while often maligned as destructive and destabilizing forces have in fact been the engine of past breakthroughs and will drive future advances In other words Bubbles aren't all bad Integrating insights from economics philosophy and history *Boom* identifies the root causes of the Great Stagnation and provides a blueprint for accelerating innovation By decreasing collective risk aversion overfunding experimental processes and organizing high agency individuals around a transcendent

mission bubbles are the key to realizing a future that is radically different from the present Boom offers a definite and optimistic vision of our future and a path to unleash a new era of global prosperity *Dark Star* Matthew H.

Hersch,2023-12-26 A captivating history of NASA s Space Transportation System the space shuttle chronicling the inevitable failures of a doomed design In *Dark Star* Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years NASA s space shuttle He begins with the origins of the space shuttle a century long effort to develop a low cost reusable rocket powered airplane to militarize and commercialize space travel which Hersch explains was built the wrong way at the wrong time and for all the wrong reasons Describing the unique circumstances that led to the space shuttle s creation by President Richard Nixon s administration in 1972 and its subsequent flights from 1981 through 2011 Hersch illustrates how the space shuttle was doomed from the start While most historians have accepted the view that the space shuttle s fatal accidents including the 1986 Challenger explosion resulted from deficiencies in NASA s management culture that lulled engineers into a false confidence in the craft *Dark Star* reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became available to eliminate its obvious flaws Hersch s work seeks to answer the perilous questions of technological choice that confront every generation and it is a critical read for anyone interested in how we can create a better world through the things we build **Bowker's Complete Video**
