Security for Web Services and Service-Oriented Architectures Elisa Bertino, Lorenzo Martino, Federica Paci, Anna Squicciarini, 2009-10-22 Web services technologies are advancing fast and being extensively deployed in many different application environments Web services based on the extensible Markup Language XML the Simple Object Access Protocol SOAP and related standards and deployed in Service Oriented Architectures SOAs are the key to Web based interoperability for applications within and

across organizations Furthermore they are making it possible to deploy applications that can be directly used by people and thus making the Web a rich and powerful social interaction medium The term Web 2.0 has been coined to embrace all those new collaborative applications and to indicate a new social approach to generating and distributing Web content characterized by open communication decentralization of authority and freedom to share and reuse For Web services technologies to hold their promise it is crucial that security of services and their interactions with users be assured Confidentiality integrity availability and digital identity management are all required People need to be assured that their interactions with services over the Web are kept confidential and the privacy of their personal information is preserved People need to be sure that information they use for looking up and selecting services is correct and its integrity is assured People want services to be available when needed They also require interactions to be convenient and personalized in addition to being private Addressing these requirements especially when dealing with open distributed applications is a formidable challenge

Thermodynamics of Solutions Eli Ruckenstein, Ivan L. Shulgin, 2009-06-17 This book consists of a number of papers regarding the thermodynamics and structure of multicomponent systems that we have published during the last decade Even though they involve different topics and different systems they have something in common which can be considered as the signature of the present book First these papers are concerned with difficult or very nonideal systems i.e. systems with very strong interactions e.g. hydrogen bonding between components or systems with large differences in the partial molar volumes of the components e.g. the aqueous solutions of proteins or systems that are far from normal conditions e.g. critical or near critical mixtures Second the conventional thermodynamic methods are not sufficient for the accurate treatment of these mixtures Last but not least these systems are of interest for the pharmaceutical biomedical and related industries In order to meet the thermodynamic challenges involved in these complex mixtures we employed a variety of traditional methods but also new methods such as the fluctuation theory of Kirkwood and Buff and ab initio quantum mechanical techniques The Kirkwood Buff KB theory is a rigorous formalism which is free of any of the approximations usually used in the thermodynamic treatment of multicomponent systems This theory appears to be very fruitful when applied to the above mentioned difficult systems

Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles

dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science, engineers and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems, techniques and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems, results and techniques.
