Prevention Of Myocardial Infarction:

Prevention of Myocardial Infarction JoAnn E. Manson, 1996 Coronary heart disease remains the leading cause of death in both men and women in most industrialized countries Yet it is largely preventable and health care providers can acquire the skills to help their patients reduce their risks substantially Traditional risk factors such as cigarette smoking hypercholesterolemia hypertension sedentary lifestyle obesity and glucose intolerance explain a major proportion of coronary events Recent evidence also suggests important adjunctive roles for hormone replacement therapy in postmenopausal women and aspirin prophylaxis in individuals at high risk of a first myocardial infarction Emerging evidence indicates an important role for diet in the prevention of heart disease Although the importance of lifestyle and behavioral modifications may well be known among physicians and other health care providers the implementation of this knowledge has been limited One reason is that the information supporting the value feasibility and cost effectiveness of risk reduction strategies has not been previously synthesized and made widely available to health care providers in office and community settings Prevention of Myocardial Infarction fills these critical gaps by providing a state of the art compendium of the scientific evidence on the efficacy of coronary disease prevention while focusing on helping clinicians develop intervention skills to utilize available knowledge Chapters by leading authorities in cardiovascular epidemiology clinical cardiology cost effectiveness analysis and public health translate the theory of preventive cardiology into feasible implementation The counseling and other intervention strategies described in this textbook have documented clinical efficacy and cost effectiveness and they require little time to learn or implement The book is written mainly for primary care providers including general internists and family physicians but will also be of interest to medical subspecialties such as cardiologists and endocrinologists as well as medical students dietitians psychologists epidemiologists and students practitioners and researchers in public health

Secondary Prevention in Coronary Artery Disease and Myocardial Infarction P. Mathes, 2012-12-06 Despite considerable effort in primary prevention coronary heart disease continues to be the leading cause of death in the industrialized nations The patient who survives his first myocardial infarction carries approximately a tenfold risk of recurrence and sudden death when compared to the normal population The concept of secondary prevention therefore has emerged as an active strategy aimed at the reduction of fatal and non fatal recurrences of myocardial infarction Apart from risk factors of relevance in primary prevention secondary prevention is dependent on the extent of the disease itself in other words the number of vessels involved the extent of myocardial damage and the degree of electrical instability Nonmedical aspects such as the level of education the degree of social support and the attitude towards stress also appear to influence the prognosis The aim of this volume is to bring together all those factors relevant to achieving the maximal life span in patients afflicted with a disease that by its very nature is a lifelong process However as the late Paul Dudley White stated appropriately more than 40 years ago it is not sufficient merely to add years to a life one should also add life to the years This concept truly is the nucleus of

secondary prevention since only a life worth living generates the motivation needed to take all the steps necessary in secondary prevention. The authors and the editor are most grateful to Pharma Schwarz Inc.

Preventive Cardiology Jo Anne Micale Foody, 2007-11-03

Preventive cardiology is a fast-moving field that places emphasis on the prevention and treatment of coronary disease. *Preventive Cardiology: Insights Into the Prevention and Treatment of Cardiovascular Disease*, Second Edition, is intended for clinical cardiologists, internists, primary care providers and allied health care professionals who wish to extend their knowledge and expertise in the rapidly expanding field of preventive cardiology. It is the mission of this book to provide clinicians with the understanding and tools necessary to implement prevention in their daily practices. Recent changes in the delivery of health

care in the United States and abroad in conjunction with new scientific evidence supporting the role of preventive strategies in the maintenance of cardiovascular health have focused new attention and efforts on the field of cardiovascular disease prevention. The field of cardiology is thus making a gradual transition from the technology driven intervention oriented perspective of the last several decades to a new preventive molecular based perspective. As fresh evidence amasses that preventive measures produce a considerable decrease in the incidence of both primary and secondary cardiac events and mortality, there is growing widespread acknowledgment that health care providers from all arenas must initiate preventive strategies in the management and care of their patients.
