Ras Oncogenes:

ras Oncogenes D. Spandidos, 2013-06-29 Proceedings of the workshop held Nov 1988 Ras genes constitute an important family among the fifty oncogenes which have been discovered so far and they contribute significantly to the human tumor burden since around 70% of human tumors have an increased level of ras gene product and 40% carry a mutation. Oncogenes Geoffrey M. Cooper, 1995 The second edition of this authoritative text details major advances and developments in the field such as the identification of many new tumor suppressor genes and the striking progress in understanding signal transduction pathways leading to cell proliferation. *Oncogenes* Second Edition addresses the needs of advanced undergraduates, graduate students, medical students, physicians, and scientists by examining the current state of oncogene study and where future research may lead. **Oncogenes** C.C. Benz, E.T. Liu, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy? The few general oncology text books are generally out of date. Single papers in specialized journals are informative but seldom comprehensive; these are more often preliminary reports on a very limited number of patients. Certain general journals frequently publish good in-depth reviews of cancer topics and published symposium lectures are often the best overviews available. Unfortunately, these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered. *Cancer Treatment and Research* is a series of authoritative volumes that aim to meet this need. It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics, revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription. We have approached the problem in the following fashion: first by dividing the oncology literature into specific subdivisions such as lung cancer, genitourinary cancer, pediatric oncology, etc. and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis. Each topic and tumor type is covered in a volume appearing frequently and predictably, discussing current diagnosis, staging, markers, all forms of treatment modalities, basic biology, and more.

Oncogenes and Cancer Stuart A. Aaronson, 1987-12 Discoveries that a small subset of cellular genes, proto-oncogenes, are frequent targets of carcinogenic insults or chance that convert them to oncogenes have opened new areas of approach to understanding and eventually controlling the events leading to cancer. New technology has made it possible not only to identify genes involved in the etiology of cancer but to dissect their molecular composition. This symposium brought together scientists from areas of carcinogenesis and molecular biology to review the state of the art in this field. The papers presented in this proceedings volume can be grouped into four broad areas: the mechanisms of oncogene activation and associations of oncogenes with tumors; the mechanisms of oncogene action; the physiology of proto-oncogenes; and the discovery and characterization of new oncogenes. **Hormones, Growth Factors & Oncogenes** Enrique Pimentel, 1987-06-30 This text examines the hormones and peptide growth factors involved in the regulation of metabolism, growth, and differentiation in

metazoan organisms and proto oncogene expression Investigates protein products of some proto oncogenes for involvement in the transductional and post transductional and mechanisms of hormones and peptide growth factors *Oncogenes* Kathy B. Burck, Edison T. Liu, James W. Larrick, 2012-12-06 Cancer viruses have played a paradoxical role in the history of cancer research Discovered in 1911 by Peyton Rous 1 at the Rockefeller Institute they were largely ignored for several decades Witness his eventual recognition for a Nobel Prize but not until 1966 setting an all time record for latency and testimony to one more advantage of longevity In the 1950s another Rockefeller Nobelist Wendell Stanley spearheaded a campaign to focus attention on viruses as etiological agents in cancer his plat form having been the chemical characterization of the tobacco mosaic virus as a pure protein correction ribonucleoprotein in 1935 2 This doctrine was a centerpiece of the U S National Cancer Crusade of 1971 if human cancers were caused by viruses the central task was to isolate them and prepare vaccines for immunization At that point many observers felt that perhaps too much attention was being devoted to cancer viruses It was problematic whether viruses played an etiological role in more than a handful of human cancers **Elements of Human Cancer** Geoffrey M. Cooper, 1992 This best selling volume provides a broad overview of cancer from the basic biology and causes of human cancer through detailed discussion of the major types of cancer A concluding chapter summarizes progress and discusses current and future directions in cancer research and treatment *Oncogenes and Tumor Suppressor Genes in Human Malignancies* Christopher Benz, E.T. Liu, 2012-12-06 The first edition of *Oncogenes* 1989 focused on several of the better known transforming mechanisms and surveyed a spectrum of solid tumors and hematologic malignancies Several of the nearly 50 known oncogenes most relevant to human disease were examined In contrast this volume presents a very different profile and balance of subject material that reflects the rapidly changing field of molecular oncology and its newly emerging concepts Among the most important discoveries of the past 4 years are the identification of nearly a dozen different tumor suppressor genes and the finding of an entirely new class of cancer causing gene bcl 2 that acts by inhibiting cell death rather than stimulating cell proliferation This edition begins by reviewing selected malignancies in which our earlier search for clinically relevant oncogenes has led to more focused studies on gain of function and loss of function genetic abnormalities as well as autocrine and paracrine growth factor loops known to regulate tumor physiology and malignant cell behavior Curiously many of these genetic and functional abnormalities are shared by several different tumor types and are not uniformly present in all tumors of the same type This observation brings up molecular questions about the tissue specific determinants that underlie individual cancers and also gives added impetus to the suggestion that molecular abnormalities referred to as tumor markers be included among the histopathologic features used for clinical diagnosis and management *The Superfamily of ras-Related Genes* Demetrios A. Spandidos, 2013-03-08 since the earliest results on the linkage between ras activation and cell transformation appeared a vast amount of additional information has been generated which emphasizes the importance of ras related genes in membrane trafficking cell proliferation

differentiation and cancer These advances led to the development of new strategies for the diagnosis prognosis and prevention of cancer Ras related genes appear to be central to the mechanism of transformation by other oncogenes and therefore constitute a focal point upon which attempts to intervene in the process of carcinogenesis will be concentrated The present volume contains the contributions to the NATO Advanced Research Workshop on the The Superfamily of ras Related Genes held in Agia Pelagia Heraklion Crete Greece May 1991 At this meeting the leading researchers in this field came together to discuss the most recent progress in analysis of biological function of the ras related genes As an organizer I feel that the Workshop was a success and would like to thank all the participants and the contributors to this volume I thank the NATO Scientific Affairs Division Brussels the Greek Ministry of Industry Energy and Technology the International Center for Cancer Research the National Hellenic Research Foundation and the Medical School University of Crete for sponsoring the Meeting

Oncogenes and Retroviruses Peter K. Vogt, 2012-12-06 The newest volume in the Current Topics in Microbiology and Immunology series edited by Dr Vogt and dealing with oncogenes and retroviruses contains four review articles by international authorities in the field These articles presenting the latest research results continue the tradition of excellence for which the series is so well known

Oncogene and Transgenics Correlates of Cancer Risk Assessments Constantine Zervos, 2012-12-06 The data the information and even the overarching knowledge necessary for risk assessments of economically important environmental carcinogens come for the most part from the applied biological disciplines e g toxicology epidemiology biostatistics etc The more fundamental biological disciplines e g biochemistry cell biology molecular biology molecular genetics of cancer etc have enormous but unrealized potential to improve current cancer risk assessment methods The objective of this advanced research workshop ARW was to advance the state of the art of cancer risk assessment methods by identifying potential short and long term contributions to such methods from the more fundamental disciplines Attention was paid to short and long term contributions from research advances in the biochemistry and physiology of oncogenes oncogenes research and in the construction and utilization of transgenic animals transgenics research In the last 20 years researchers in the fundamental biological disciplines i e biochemists geneticists molecular and cell biologists etc have inter alia advanced spectacularly our understanding of the nature of neoplastic diseases Their phenomenal progress is the combined result of both advances and refinements of the techniques available to them and of new fundamental discoveries Among the latter the most significant are the discoveries of oncogenes and of the feasibility of creating transgenic animals i e of transferring well defined and expressible genes from the cells of one species of organisms to the embryonic cells of another

Breast Cancer: Cellular and Molecular Biology Marc E. Lippman, Robert B. Dickson, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of particular malignancy The few general oncology text books are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain

Environmental Health Perspectives, 1993 *New Molecular Targets for Cancer Chemotherapy* David J. Kerr, Paul Workman, 1994-06-27 This book covers a wide range of novel biochemical targets that appear to be the best leads in terms of designing novel targets for anticancer drug design *New Molecular Targets for Cancer Chemotherapy* is a unique multi disciplinary effort with internationally respected authors from the fields of growth factor receptor interaction phosphoinositide and phospholipase signal transduction and DNA drug binding interactions The science is placed in clinical context and illustrations explain how clinicians can incorporate a mechanistic pharmacodynamic approach into early clinical trial design

Ulcerative Colitis Colm A. O'Morain, 1991-01-03 Ulcerative colitis is a disease characterized by its chronic nature exacerbation and remissions The disease is of unknown etiology and has stimulated a substantial amount of research into the condition and its cause This book provides a comprehensive review of the subject covering topics such as the immunological infective psychological and dietary factors of its etiology clinical presentation extraintestinal manifestations histopathology mediators of inflammation medical treatment including dealing with the acute attack maintenance of remission and a review of new treatment surgical methods and the social toll and prognosis for the future Ulcerative Colitis is a useful reference resource for internists gastroenterologists gastrointestinal surgeons gastrointestinal researchers nutritionists dieticians the pharmaceutical industry and medical undergraduates

Cellular and Molecular Biology of Mammary Cancer E. Anderson, G. Heppner, W. Kidwell, Daniel Medina, 2012-12-06 The idea for this book arose during the 1985 Gordon Conference on Mammary Gland Biology New developments in the methodology of cell biology and the explosive growth of molecular biology had begun to impact upon our understanding of mammary gland growth and function It seemed a propitious time for summarizing the current status of knowledge of the cell and molecular biology of mammary cancer and for attempting to outline future areas of concern and interest The reviews presented here were completed by the Fall of 1986 Although new insights will surely continue to emerge it is hoped that the material in this volume will form not only a current update but a basic core of information for future experiments We have not attempted to

cover all areas of mammary gland transformation Those areas where recent detailed reviews are already available have been omitted Also the areas of normal gland development cell ultrastructure hormone responsiveness chemotherapy and clinical aspects of mammary cancer have not been included Instead we have selected those areas where the development of new methodology reagents and results have led to new ideas about mammary gland function and development as they are related to neoplasia

Molecular Carcinogenesis and the Molecular Biology of Human Cancer David Warshawsky, Joseph R. Landolph Jr., 2005-10-31 To gain a complete overview of what is presently known about molecular carcinogenesis would prove to be a very daunting task for those not already steeped in this complex subject Providing an in depth summary of the molecular aspects of carcinogenesis this text comprehensively covers chemical radiation and viral carcinogenesis from animal and human test data to metabolism and DNA binding It covers organic and metal carcinogenesis related to lung breast prostate skin liver colon brain and thyroid cancers The book explores the human implications of data regarding oncogenesis of transgenic and knockout mice and rats It also covers the genomics and proteomics of chemoprevention risk and exposure assessments and regulation of carcinogens

Molecular Carcinogenesis and the Molecular Biology of Human Cancer is an ideal text for graduate courses in cancer

The Search for New Anticancer Drugs Michael Waring, B.A. Ponder, 1992-11-30 Most of the anti cancer drugs in use today were discovered by happy accident rather than design yet the rational design of better anti cancer drugs remains a cherished goal and one of the most important challenges facing medical science This book represents a compilation of views and progress reports which illustrate the diversity of approaches to the problem Recent research has confirmed the belief that critical genetic changes are at work in cancer cells The genome then DNA in biochemical terms surely represents a critical target for specific chemotherapy of cancer and several chapters address the issue of attacking DNA gene targetting and the like Others deal with principles of rational design exploitation of novel modalities and targets or the nuts and bolts of antitumour drug testing While no attempt has been made to provide a comprehensive coverage of this wide ranging and vitally important subject the present volume in the series will provide much food for thought
