**Organ Regeneration** L. D. Liozner,2013-03-09 The main theme of this monograph conditions of regeneration of organs in mammals reflects an area of increasing emphasis which permeates much current Soviet research on regeneration The introduction of this theme goes back about 25 years and emphasis on the influence of environmental conditions upon regenerative processes has fluctuated until the mid 1960s when the viewpoints on this subject were established in much the same form as they are expressed in this book For years Russian regeneration research has been characterized by the presence of several dominant and often conflicting schools of thought Since an acquaintance with these makes the interpretation of many of the theoretical implications of this book particularly in the introductory and concluding chapters considerably clearer those not familiar with the Russian literature might profit by reading my brief survey of this field
