Manifolds With Group Actions And Elliptic Operators:

Manifolds with Group Actions and Elliptic Operators Vladimir I. A. Kovlevich Lin, Yehuda Pinchover, 1994 This work studies equivariant linear second order elliptic operators P on a connected noncompact manifold X with a given action of a group G The action is assumed to be cocompact meaning that GV is dense in X for some compact subset V of X The aim is to study the structure of the convex cone of all positive solutions of P $u \geq 0$ Moment Maps, Cobordisms, and Hamiltonian Group Actions Victor Guillemin, Viktor L. Ginzburg, Yael Karshon, 2002 During the last 20 years localization has been one of the dominant themes in the area of equivariant differential geometry Typical results are the Duistermaat Heckman theory the Berline Vergne Atiyah Bott localization theorem in equivariant de Rham theory and the quantization commutes with reduction theorem and its various corollaries To formulate the idea that these theorems are all consequences of a single result involving equivariant cobordisms the authors have developed a cobordism theory that allows the objects to be non compact manifolds A key ingredient in this non compact cobordism is an equivariant geometrical object which they call an abstract moment map This is a natural and important generalization of the notion of a moment map occurring in the theory of Hamiltonian dynamics The book contains a number of appendices that include introductions to proper group actions on manifolds equivariant cohomology Spin c structures and stable complex structures It is geared toward graduate students and research mathematicians interested in differential geometry It is also suitable for topologists Lie theorists combinatorists and theoretical physicists Prerequisite is some expertise in calculus on manifolds and basic graduate level differential geometry

Liouville-Riemann-Roch Theorems on Abelian Coverings Minh Kha, Peter Kuchment, 2021-02-12 This book is devoted to computing the index of elliptic PDEs on non compact Riemannian manifolds in the presence of local singularities and zeros as well as polynomial growth at infinity The classical Riemann Roch theorem and its generalizations to elliptic equations on bounded domains and compact manifolds due to Maz'ya Plameneskii Nadirashvili Gromov and Shubin account for the contribution to the index due to a divisor of zeros and singularities On the other hand the Liouville theorems of Avellaneda Lin Li Moser Struwe Kuchment and Pinchover provide the index of periodic elliptic equations on abelian coverings of compact manifolds with polynomial growth at infinity i.e. in the presence of a divisor at infinity A natural question is whether one can combine the Riemann Roch and Liouville type results This monograph shows that this can indeed be done however the answers are more intricate than one might initially expect Namely the interaction between the finite divisor and the point at infinity is non trivial The text is targeted towards researchers in PDEs geometric analysis and mathematical physics **The Abel Prize** Helge Holden, Ragni Piene, 2009-12-01 The book presents the winners of the first five Abel Prizes in mathematics 2003 Jean Pierre Serre 2004 Sir Michael Atiyah and Isadore Singer 2005 Peter D Lax 2006 Lennart Carleson and 2007 S R Srinivasa Varadhan Each laureate provides an autobiography or an interview a curriculum

vitae and a complete bibliography This is complemented by a scholarly description of their work written by leading experts in the field and by a brief history of the Abel Prize Interviews with the laureates can be found at <http://extras.springer.com>

Handbook of Geometric Topology R.B. Sher, R.J. Daverman, 2001-12-20 Geometric Topology is a foundational component of modern mathematics involving the study of spacial properties and invariants of familiar objects such as manifolds and complexes This volume which is intended both as an introduction to the subject and as a wide ranging resouce for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research They provide the

reader with an up to date overview of this flourishing branch of mathematics Toric Topology Megumi Harada, 2008 Toric topology is the study of algebraic differential symplectic geometric combinatorial and homotopy theoretic aspects of a particular class of torus actions whose quotients are highly structured The combinatorial properties of this quotient and the equivariant topology of the original manifold interact in a rich variety of ways thus illuminating subtle aspects of both the combinatorics and the equivariant topology Many of the motivations and guiding principles of the field are provided by though not limited to the theory of toric varieties in algebraic geometry as well as that of symplectic toric manifolds in symplectic geometry This volume is the proceedings of the International Conference on Toric Topology held in Osaka in May June 2006 It contains about 25 research and survey articles written by conference speakers covering many different aspects of and approaches to torus actions such as those mentioned above Some of the manuscripts are survey articles intended to give a broad overview of an aspect of the subject all manuscripts consciously aim to be accessible to a broad reading audience of students and researchers interested in the interaction of the subjects involved We hope that this volume serves as an enticing invitation to this emerging field **Prospects in Mathematical Physics** José C. Mourão, 2007 This book includes papers presented at the Young Researchers Symposium of the 14th International Congress on Mathematical Physics held in July 2003 in Lisbon Portugal The goal of this book is to illustrate various promising areas of mathematical physics in a way accessible to researchers at the beginning of their career Two of the three laureates of the Henri Poincaré Prizes Huzihiro Araki and Elliott Lieb also contributed to this volume The book provides a good survey of some active areas of research in modern mathematical physics
