Claims on Highway Contracts Robert N. Hunter, 1997 Most civil engineering projects carried out in the UK which are concerned with the construction or maintenance of highways employ the 5th edition of the ICE Conditions of Contract and the Manual of Contract Documents for Highway Works In order to maximise returns in construction works or often nowadays to minimise losses it is necessary for engineers contractors and clients to have a full understanding of these documents particularly those elements which have a financial connotation Claims on highway contracts has been specifically written to explore those parts of the 5th edition of the ICE Conditions of Contract and the Manual of Contract Documents for Highway Works which are particularly important in the commercial aspects of highway contracts and to examine how they apply in claims situations There have been many books written on claims by lawyers which are full of legalese Claims on highway contracts is the first and only book which has been written by a practising engineer who works in this field and has experience of the claims minefield to provide advice in a practical and straightforward manner **Manual of Contract**

Managing Measurement Risk in Building and Civil Engineering Peter Williams, 2015-11-16 Measurement in civil engineering and building is a core skill and the means by which an architectural or engineering design may be modelled financially providing the framework to control and realise designs within defined cost parameters to the satisfaction of the client Measurement has a particular skill base but it is elevated to an art because the quantity surveyor is frequently called upon to interpret incomplete designs in order to determine the intentions of the designer so that contractors may be fully

informed when compiling their tenders Managing Measurement Risk in Building and Civil Engineering will help all those who use measurement in their work or deal with the output from the measurement process to understand not only the ins and outs of measuring construction work but also the relationship that measurement has with contracts procurement claims and post contract control in construction The book is for quantity surveyors engineers and building surveyors but also for site engineers required to record and measure events on site with a view to establishing entitlement to variations extras and contractual claims The book focuses on the various practical uses of measurement in a day to day construction context and provides guidance on how to apply quantity surveying conventions in the many different circumstances encountered in practice A strong emphasis is placed on measurement in a risk management context as opposed to simply taking off quantities It also explains how to use the various standard methods of measurement in a practical working environment and links methods of measurement with conditions of contract encompassing the contractual issues connected with a variety of procurement methodologies At the same time the many uses and applications of measurement are recognised in both a main contractor and subcontractor context Measurement has moved into a new and exciting era of on screen quantification and BIM models but this has changed nothing in terms of the basic principles underlying measurement thoroughness attention to detail good organisation making work auditable and above all understanding the way building and engineering projects are designed and built This book will help to give you the confidence to both measure and understand measurement risk issues by presenting the subject of measurement in a modern context with a risk management emphasis recognising the interrelationship of measurement with contractual issues including identification of pre and post contract measurement risk issues emphasising the role of measurement in the entirety of the contracting process particularly considering measurement risk implications of both formal and informal tender documentation and common methods of procurement conveying the basic principles of measurement and putting them in an IT context incorporating detailed coverage of NRM1 and NRM2 CESMM4 Manual of Contract Documents for Highway Works and POM I including a comparison of NRM2 with SMM7 and a detailed analysis of changes from CESMM3 to CESMM4 discussing the measurement implications of major main and sub contract conditions JCT NEC3 Infrastructure Conditions and FIDIC providing detailed worked examples and explanations of computer based measurement using a variety of industry standard software packages
