although they were given the option to use any word processing program. This worked well. The output from WolframAlpha can be easily copied and pasted into the word processing document as an image. Also, the copyable plain text option for WolframAlpha output allowed for multistep problems and investigating different examples of the same concept. The student did not have to type the input over again.

The Calculus Two class that participated in this project was comprised of 25 students. The students represent a variety of majors including mathematics, computer science, engineering, biology, chemistry and health science. Since one of the main goals of the project was to make the lab assignments more meaningful and accessible to the students, the Calculus Two students were asked to complete a brief survey on their experience. Nineteen students completed the survey. Many of the students in this course had a previous experience with lab assignments from Calculus One and 73% identified a specific CAS that they had used before this semester. Seventeen of the students responded that this was the first time that they had used WolframAlpha and 15 students in the course selected that they felt comfortable using WolframAlpha after the first lab assignment. That result is very encouraging since using our previous system, it would take several labs for the students to begin to feel comfortable.

From an educational standpoint, it was important to know if the students perceived that they had gained benefit in their learning of calculus as a result of the

Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see **Exploring Calculus** Crista

Progress in mathematics frequently occurs first by studying particular examples and then by generalizing the patterns that have been observed into far reaching theorems Similarly in teaching mathematics one often employs examples to motivate a general principle or to illustrate its use This volume uses the same idea in the context of learning how to teach By analyzing particular teaching situations one can develop broadly applicable teaching skills useful for the professional mathematician These teaching situations are the Case Studies of the title Just as a good mathematician seeks both to understand the details of a particular problem and to put it in a broader context the examples presented here are chosen to offer a serious set of detailed teaching issues and to afford analysis from a broad perspective Each case raises a variety of pedagogical and communication issues that may be explored either individually or in a group facilitated by a faculty member Teaching notes for such a facilitator are included for each Case in the Faculty Edition The methodology of Case Studies is widely used in areas such as business and law The consideration of the mathematics cases presented here will help readers to develop teaching skills for their own classrooms
