Mathematical Modelling Of Ocean Circulation:

Mathematical Modelling of Ocean Circulation Guriĭ Ivanovich Marchuk, Artem Sarkisovich Sarkisiĭan, 1988-10-05

The problems of ocean dynamics present more and more complex tasks for investigators based on the continuously sophistication of theoretical models which are applied with the help of universal and efficient algorithms of numerical mathematics. The present level of our knowledge in the field of mathematical physics and numerical mathematics allows one to give rather complete theoretical analysis of basic statements of problems as well as numerical algorithms. Our task is to perform such analysis and also to analyze the results of calculations in order to improve our knowledge of the mechanism of large scale hydrological processes occurring in the World Ocean. The new level of numerical mathematics has essentially influenced the formation of new solution methods of ocean dynamics problems among which an important one is the splitting method which has been already widely practised in various fields of science and engineering. A number of monographs by N. N. Yanenko, A. A. Samarsky, G. Marchuk, Rozhdestvensky and Yanenko (1968), Samarsky and Andreyev (1976), Marchuk (1970, 1980b) and others are devoted to the description of this methods. But the methods of the splitting theory require extensive creative work for their application to concrete problems which are peculiar as a rule in problem formulation. The success of the application of these methods is related to the deep understanding of the essence of the described processes. In the last decades fundamental works of Arakawa, K.

IUTAM Symposium on Advances in Mathematical Modelling of Atmosphere and Ocean Dynamics P.F. Hodnett, 2012-12-06 The goals of the Symposium were to highlight advances in modelling of atmosphere and ocean dynamics

to provide a forum where atmosphere and ocean scientists could present their latest research results and learn of progress and promising ideas in these allied disciplines to facilitate interaction between theory and applications in atmosphere ocean dynamics. These goals were seen to be especially important in view of current efforts to model climate requiring models which include interaction between atmosphere ocean and land influences. Participants were delighted with the diversity of the scientific programme, the opportunity to meet fellow scientists from the other discipline either atmosphere or ocean with whom they do not normally interact through their own discipline, the opportunity to meet scientists from many countries other than their own, the opportunity to hear significant presentations 50 minutes from the keynote speakers on a range of relevant topics. Certainly the goal of creating a forum for exchange between atmosphere and ocean scientists who need to input to create realistic models for climate prediction was achieved by the Symposium and this goal will hopefully be further advanced by the publication of these Proceedings.

Modelling Ocean Climate Variability Artem S. Sarkisyan, Jürgen Sündermann, 2009-05-13 In this wide ranging and comprehensive review of the historical development and current status of ocean circulation models the analysis extends from simple analytical approaches to the latest high resolution numerical models with data assimilation. The authors both of whom are pioneer scientists in ocean and shelf sea modelling look back at the evolution of Western and Eastern modelling methodologies during the second half of the last century. They also present the very latest information on ocean climate modelling and offer examples for a number of oceans and shelf seas. The book includes a critical analysis of literature on ocean climate variability modelling as well as assessing the strengths and weaknesses of the best known modelling techniques. It also anticipates future developments in the field focusing on models based on a synthesis of numerical simulation and field observation and on nonlinear thermodynamic model data synthesis.

Numerical Ocean Circulation Modeling Aike Beckmann, Dale B Haidvogel, 1999-04-29 This book offers a comprehensive overview of the models and methods employed in the rapidly advancing field of numerical ocean circulation modeling. For those new to the field concise reviews of the equations of oceanic motion, sub grid scale parameterization and numerical approximation techniques are presented and four specific numerical models chosen to span the range of current practice are described in detail. For more advanced users a suite of model test problems is developed to illustrate the differences among models and to serve as a first stage in the quantitative evaluation of future algorithms. The extensive list of references makes this book a valuable text for both graduate students and postdoctoral researchers in the marine sciences and in related fields such as meteorology and climate and coupled biogeochemical modeling.

Numerical Modeling of Ocean Circulation Robert N. Miller, 2007-01-18 The modelling of ocean circulation is important not only for its own sake but also in terms of the prediction of weather patterns and the effects of climate change. This 2007 book introduces the basic computational techniques necessary for all models of the ocean and atmosphere and the conditions they must satisfy. It describes the workings of ocean models, the problems that must be solved in their construction and how to evaluate

computational results Major emphasis is placed on examining ocean models critically and determining what they do well and what they do poorly Numerical analysis is introduced as needed and exercises are included to illustrate major points Developed from notes for a course taught in physical oceanography at the College of Oceanic and Atmospheric Sciences at Oregon State University this book is ideal for graduate students of oceanography geophysics climatology and atmospheric science and researchers in oceanography and atmospheric science *Mathematical Modeling in Studies of Arctic Ocean Circulation* N. Yu Doronin, A. Yu Proshutinsky, ARCTIC AND ANTARCTIC RESEARCH INST LENINGRAD (Soviet Union), 1992 A hierarchy of mathematical models adapted to certain physical phenomena of the Arctic Ocean has been developed The density structure of the Arctic Ocean water is characterized by a well marked stratification This allows us to describe it by means of models with a discrete stratification In this context a two dimensional model of the upper 200 m of the ocean can be considered as the lowest level of a hierarchy of models With the help of this model coupled with the ice drift model seasonal oscillations of sea level and variability of barotropic water circulation in the annual cycle affected by wind atmospheric pressure and river runoff were studied The same model is used to successfully predict level oscillations and ice drift up to 6 days in advance The multi layer models are suggested as models of the second level For example energy concentration in the upper layer of the ocean the main property of baroclinicity is well simulated in the two layer version The advantage of these models as compared with those of the first level is that the depth of the interface is given as a solution The diagnostic two layer model is quite simple to use on small computers The prognostic two layer model allows one to estimate the time when the water circulation becomes stationary in the ocean of real depth The diagnostic three dimensional ocean model with a continuous stratification is suggested as the third level model The elliptical equation relative to denivelation of the free surface is the governing equation of the model The estimation of the terms of the motion and continuity equations indicates the need to introduce geostrophic corrections for non linear effects and a horizontal turbulent exchange when calculating vertical current velocity **NBS Special Publication** ,1973 Physical and Mathematical Modeling of Earth and Environment Processes Vladimir Karev, Dmitry Klimov, Konstantin Pokazeev, 2018-03-24 This book is the result of collaboration within the framework of the Third International Scientific School for Young Scientists held at the Ishlinskii Institute for Problems in Mechanics of Russian Academy of Sciences 2017 November The papers included describe studies on the dynamics of natural system geosphere hydrosphere atmosphere and their interactions the human contribution to naturally occurring processes laboratory modeling of earth and environment processes and testing of new developed physical and mathematical models The book particularly focuses on modeling in the field of oil and gas production as well as new alternative energy sources **Hydraulic Research in the United States and Canada** United States. Anderson, J. Willebrand, 2012-12-06 This book which is the outcome of a NATO Advanced Study Institute on Modelling the Ocean Circulation and Geochemical Tracer Transport is concerned with using models to infer the ocean circulation Understanding our climate is one of the major problems of the late twentieth century The possible climatic changes resulting from the rise in atmospheric carbon dioxide and other trace gases are of primary interest and the ocean plays a major role in determining the magnitude temporal evolution and regional distribution of those changes Because of the poor observational basis the ocean general circulation is not well understood The World Ocean Circulation Experiment WOCE which is now underway is an attempt to improve our knowledge of ocean dynamics and thermodynamics on global scales relevant to climate change Despite those efforts the oceanic data base is likely to remain scarce and it is crucial to use appropriate methods in order to extract the maximum amount of information from observations The book contains a thorough analysis of methods to combine data of various types with dynamical concepts and to assimilate data directly into ocean models The properties of geoclimatical tracers such as ^3H ^3He Tritium and Freons and how they may be used to impose integral constraints on the ocean circulation are discussed Selected Water Resources Abstracts, 1979
